

STEVE CANYON

IT DAWNS UPON STEVE THAT THE PAPERS OF THE COSSACK HE IS IMPERSONATING WOULD CARRY THE TEST DATA FOR THE MAGIC BRAIN — AND, SINCE THE RADIO OPERATOR IS NOT PART OF THE PLOT, THE INSTRUCTIONS ARE TO RUN THE EXPERIMENT IN PLAIN MORSE CODE — AS IF IT WERE NOT EVEN IMPORTANT...

MILTON CANIFF

YOUR SUBMARINE COMMANDER WILL HAVE PROVED THESE PROBLEMS IN ADVANCE, SMRNSK! HE WILL TEST THE MAGIC BRAIN TO LEARN IF IT CAN DO THE MATHEMATICS BY TWO-WAY RADIO... WHILE SUBMERGED!

THE SUBMARINE RADIO IS SENDING US THE DATA THEY ARE GATHERING BY RADAR, SONAR AND THE OTHER DEVICES, ON A SIMULATED TARGET NOW WITHIN THEIR RANGE, BUT OUT OF SIGHT...

AS THE FIGURES ARE RECEIVED HERE, THEY ARE FED INTO THE MACHINE...IT AUTOMATICALLY REFERS TO ITS 'MEMORY,' THEN ANSWERS THE QUESTION. THIS IS THEN SENT BACK TO THE SUB BY RADIO! IN WAR TIME, OF COURSE, THE WORDS ON THE AIR WOULD BE 'SCRAMBLED' FOR SECURITY!

TARGET IS— HEADING DUE WEST AT 8 KNOTS. DIMENSIONS=465' BY 60' BY 26'. INDICATED IDENTITY=U.S. OILER OF "WOLF CREEK" CLASS, 5,375 TONS. GUNS= 2-5", 51 CAL., 2-3" AA, QUADRUPEL EXPANSION TURBINE ENGINES 2,900 H.P., 10-5 KNOTS...

...CAPACITY = 11,200 TONS OIL FUEL, OWN FUEL = 1,200 TONS OIL, CREW COMPLEMENT 110 MEN....VERIFY!

правильный!

ALL DATA CONFIRMED

WELL, SMRNSK, ARE YOU SATISFIED WITH THE TEST?

I AM NOT SO SURE...

ОКЕЙ!

YOU ARE THE BIG PROBLEM! YOU WISH TO TURN OVER THIS MACHINE TO MY COUNTRY, — BUT IF YOU ARE A TRAITOR TO THE UNITED STATES, WHY WOULD YOU NOT ATTEMPT TO DO THE SAME TO US?

W-WHY...

I-I THOUGHT IT WAS ALL ARRANGED! — I WAS TO TURN THE MACHINE OVER TO YOU AND GO BACK WITH YOU TO SUPERVISE THE MANUFACTURE OF THE MAGIC BRAINS FOR THE GLORY OF THE CAUSE OF WORLD LIBERATION!

NOT YET! — BEFORE I WILL ACCEPT YOUR MACHINE I AM SENDING YOU ASHORE UNDER GUARD UNTIL YOU PROVE YOUR POLITICAL STABILITY!

— WHICH WOULD GIVE YOU JUST ENOUGH TIME TO SAIL THE SHIP AWAY AND CARRY THE ENTIRE THING BACK TO AMERICA!! I WILL TAKE OVER NOW, MY YANKEE HUSBAND!

Synopsis: KING AGUAR LOOKS AT THE THREE MEN WHO ARE BROUGHT BEFORE HIM. FROM THEM HE WILL LEARN ABOUT CHRISTIANITY--THE FAITH OF HIS SON PRINCE VALIANT, OF KING ARTHUR AND ALL HIS KNIGHTS.

THESE MEN DARE TO PREACH TO HIS TURBULENT PEOPLE, TO SUFFER HARDSHIP, CRUELTY AND EVEN DEATH WITHOUT FLINCHING FOR THE SAKE OF THEIR MISSION.

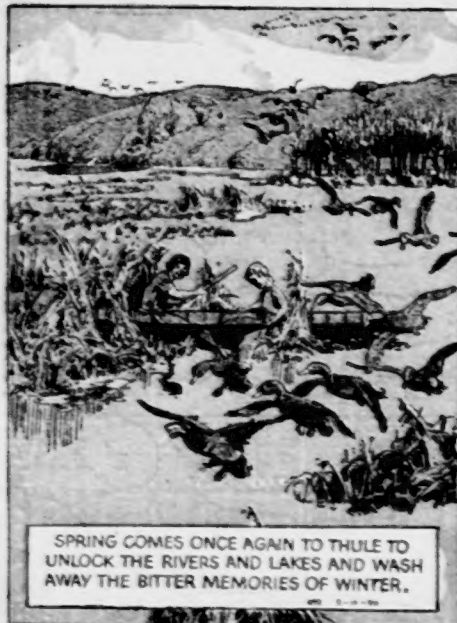

THE KING WISHES TO BRING KING ARTHUR'S CREED TO THULE, THAT RIGHT MAY COME BEFORE MIGHT, THAT JUSTICE BE FOR ALL AND THE RIGHTS OF THE WEAK RESPECTED. PERHAPS CHRISTIANITY IS THE ANSWER!

SO HE ASKS THE THREE PILGRIMS TO INSTRUCT HIM. AND GREAT IS HIS DISAPPOINTMENT WHEN HE DISCOVERS THAT THESE, LIKE SO MANY OF THE EARLY, MILITANT EVANGELISTS, ARE SINCERE AND HONEST BUT SO POORLY INFORMED THAT THEY EVEN DISPUTE BITTERLY AMONG THEMSELVES!

THEN THEY GO THEIR SEPARATE WAYS AMONG THE SAVAGE PAGANS, EACH TO PREACH THE WORD AS BEST HE MAY.

SPRING COMES ONCE AGAIN TO THULE TO UNLOCK THE RIVERS AND LAKES AND WASH AWAY THE BITTER MEMORIES OF WINTER.

AND THE KING IS SAYING TO PRINCE VALIANT: "PERHAPS THE TEACHINGS OF THE GENTLE CHRIST CAN CALM THE FIERCE SPIRIT OF MY PEOPLE AND TURN THEM FROM VIOLENCE AND PIRACY. SO I AM SENDING YOU FAR TO THE SOUTH TO ASK THE HEAD OF YOUR FAITH TO SEND LEARNED AND COMPETENT TEACHERS TO US."

NEXT WEEK - Parting.

Little Orphan Annie

THE CAT AND MOUSE GAME IS USUALLY MORE FUN FOR THE CAT—BUT WHEN THE MOUSE IS LOADED IT CAN CHANGE EVERYTHING.

Q.K.—WE'RE ALL ON BOARD, SKIPPER—CAST OFF AND LET'S GET UNDER WAY—

BUT, LEAPIN' LIZARDS! IT'S ALL SO DARK!

HOW CAN HE TELL WHERE HE'S GOIN' WITH NO LIGHTS AT ALL?

OH, WE CARRY VERY MODERN EQUIPMENT—THE PILOT CAN SEE FINE—OF COURSE, ANYONE ELSE WITH THE SAME TYPE OF EQUIPMENT COULD SEE US, TOO—

BUT THAT'S HARDLY LIKELY ON THIS RIVER—I'M HOPING TO BE FAR ENOUGH UPSTREAM BY MORNING SO THAT IVAN WILL HAVE A TOUGH TIME PICKING UP OUR TRAIL—

UP STREAM? YOU MEAN BACK UP INTO THE HILLS?

SURE—FAR AWAY FROM ANY BIG TOWN—GOT A CABIN UP THERE—EH? WHAT IS IT, FSP? SEE SOMETHING?

A FAST CRAFT FOLLOWS US—IT, TOO, RUNS WITHOUT LIGHTS—

YES! WELL, IVAN'S BOYS WERE SMARTER THAN I THOUGHT—

TOO SMART TO REMAIN HEALTHY, PERHAPS! COME, PURRAB!

HEY! WHAT ARE THEY GOIN' TO DO, "DADDY"? THEY WENT AFT BELOW DECK!

MAYBE THEY ARE DRAGGING A LITTLE BAIT ON A LINE FOR IVAN'S JOKER TO CHASE—

LEAPIN' LIZARDS! WHAT WAS THAT?

THE BAIT, ANNIE! LIVE BAIT! THEY CAUGHT IT!

LATER.

HERE WE ARE, SKIPPER—WHEN WE'RE ASHORE, YOU'LL HAVE TIME BEFORE DAYLIGHT TO DROP BACK DOWNSTREAM—

A-VE-AVE, SIR—WE'LL APPEAR NEAR WHERE THEIR CRAFT—AH—BLEW UP—

EXACTLY! AND FROM A DISTANCE, ANY OF IVAN'S BOYS EASILY WILL MISTAKE YOU FOR ME, IN THAT DISGUISE—

WOW! YOU EVEN HAD ME FOOLED—

QUIET, NOW! ONLY A FEW YARDS TO THE JETTY! EASY DOES IT, BOYS!

AH—FINE—HERE WE ARE—THE LITTLE CABIN JUST AS WE LEFT IT—PEACEFUL HERE, EH?

LOOKS AWFUL WILD TO ME—WHAT I CAN SEE OF IT, SO FAR!

ONLY THE TRACKS OF A BEAR AND SEVERAL DEER—NO HUMAN TRACKS, SAME, SINCE WE WERE HERE—

Gasoline Alley

POPPY, CAN I HAVE A QUARTER TO BUY CLOVIA A HARMONICA FOR HER BIRTHDAY TOMORROW?

A VERY GOOD THOUGHT, CHIPPER.

I THOUGHT THAT WAS FOR CLOVIA.

I'M JUST SEEIN' IF IT WILL PLAY.

HERE'S A BIRTHDAY PRESENT, CLOVIA. MAYBE IT'S TOO OLD FOR YOU.

I'LL SHOW YOU HOW TO PLAY IT.

LET ME BLOW IT! WE, TOO, CHIPPER! I CAN'T, TAIN'T MINE.

IF IT'S CLOVIA'S, DON'T YOU THINK SHE OUGHT TO HAVE IT, CHIPPER?

SEE, SHE ISN'T OLD ENOUGH YET!

SHE'LL BE OLDER BY CHRISTMAS. I'LL PUT IT WITH MY THINGS.

BUILDERS' AND HOME REVIEW

Plans for the New Residence
Suggestions for Remodelling Homes
Radios and Appliances for the Home

NEW IDEAS

Water Saved With Several New Devices

Experience with the water shortages of the last year have turned attention of plumbing manufacturers to a wide variety of water-saving equipment.

Water-saving shower heads, self-closing water faucets and valves, water closets that operate with less water consumption, lavatories with smaller bowls that discourage high levels, are part and parcel of the water saving campaign.

Shower heads are concentrating the water streams, rather than diffusing them, providing a better shower with less water than the old-style, perforated type of head.

The self-closing water faucets clamp tightly when the handle is released. Another type of faucet can be controlled to emit only the volume of water for the immediate need.

Still another faucet type conserves water by mixing air with the water, thus providing richer and more active suds in the saving of both water and soap.

Hay Cannon Speeds Farmer

Farmers can speed the work of mowing baled hay in the barn with a pneumatically operated cannon that fires the hay into the loft.

The gun is placed 10 to 15 feet from the opening through which the bales are to be shot. In tests, a two-man crew handled 7.7 bales a minute with the gun, compared with 3.2 bales with a conventional grapple fork.

The gun will throw a 58-pound bale 21 feet vertically and 48 feet horizontally at an angle of 60 degrees.

About two per cent of the bales were broken in the test, whereas 3.4 per cent were broken when hauled to the mow and dropped from a grapple fork.

A geographical mile is the length of one minute of latitude.

New Sofa Beds Are Far Cry From Old

Matching Pieces Take On New Look for Rooms

Do you know a bedroom when you see one? Don't be too sure. A living room may be a living room by day only, and a bedroom by night. New sofa beds turn from the day shift to the night shift with a twist of the wrist, but their good looks give no clue to double action.

The sofa bed isn't at all what it used to be, and a good thing it is. Only a few years ago you could spot a two-purpose piece every time by an oddly pitched back, uncomfortable stiffness, a sorry cover fabric and a complete lack of style. Worse still, the bed department was a make-do. It didn't attempt to equal the comfort of a permanent bed.

But it's no trick today to find sofa beds that measure up to the style requirements of furniture that conceals no extra purpose, while they give deep sleeping comfort.

This year's special dual sleep equipment news is the adaptability of the newest numbers to the decoration of the room.

Loveseats and sofa that turn into beds are matched by chairs, so room planning smooths along easily with go-together styles and identical fabrics and colors.

Some chairs also convert to use for sleeping. Right and left-arm designs make corner arrangement easy or work into the favorite fire-side plan. And loveseats and sofas that turn into beds are matched by the same pieces which do not, so you may have a pair of them with exactly the extra sleeping equipment you need and no more.

For instance, the one-arm sofas are made both ways. Because one makes a double bed or twin beds, there is little need for the other to convert, and of course the non-convertible sofa costs less than the other.

Even the finish on a wooden coat hanger must be tailored to its purpose. It must be smooth—so as to avoid catching and tearing the threads of a garment. It must also have a pleasing color and a glossy surface.

Midget 'Cat' Does Well

Capable of a smaller-scale version of the same tasks its giant counterparts perform is a midget bulldozer, called the "Mighty Mouse."

It will do grading, excavating, backfilling, snow removal and similar work, with the added advantage of being able to operate in close quarters. It can push or pull with power equal to its weight—800 pounds—and carry loads as heavy as 500 pounds.

A combination scoop and dozer blade, 36 inches wide and 14 inches deep, operates hydraulically and is dumped by means of a finger-tip trigger at the driver's left hand. Each track has a separate drive-and-brake lever and the vehicle turns on either one within an eight-foot circle.

An air-cooled, five-horsepower gasoline engine provides forward and reverse speeds up to six miles an hour.

When it has to be moved sizeable distances, the bulldozer can be driven up detachable ramps into a "tote wagon" trailer, which can also be hooked onto the bulldozer as a load carrier. A built-in jack braces the wagon for loading and a floor canvas simplifies unloading.

The cross-bow was used in England chiefly during the 12th and 13th centuries.

SOME FLOWERS FOR SUMMER

There are no annuals that can be expected to grow well where they receive sunshine for only three-quarters of an hour a day.

There are, however, a very considerable number of perennials which may be expected to thrive under these conditions providing the soil and other cultural needs are to their liking.

Among the best are lilies-of-the-valley, plantain lilies, forget-me-nots, trilliums, cimicifuga, English and Spanish bluebells, day lilies, primroses, phlox divaricata, bloodroot, May apple, epimedium and ajuga.

Exports of Alberta's refined oil products increased 224 per cent between January 1948 and January 1950.

Cowfeteria Is Latest On Building

Cattle serve themselves in a scientifically designed barn that saves hundreds of man-hours of labor each year and permits them to satisfy their hunger at will just as they do in the pasture.

A winter's supply of hay is stored in the top of the barn, which is essentially a small Quonset building placed inside a larger one.

The cattle feed at the bottom through gates and the weight of the hay keeps the feeding racks filled.

There is enough play in the vertical gates to dislodge small amounts of hay when a cow nudges them with her head.

A duct system, built into the barn, dries the hay in the barn, taking only three or four days. In a test, it took only four man-hours of labor to feed 70 tons of dry hay to 44 steers.

"The Richest Spot in Canada Today"

TRIM LINES of modern Edmonton house are featured in this prepossessing home in Highlands, at Ada Boulevard and 74 avenue. Attached garage, entered from either outside or from kitchen of house

saves many steps for owner, especially in rainy weather. Roomy interior is another big feature of new home.

North Gets Preference For Housing Decor

By E. H. GUNDER

My neighbor to the north feels that his home is a place where he can gather about him his choice possessions; things that he loves, admires or for which he has sentimental attachment. Of these he has abundance but little knowledge on how to display them pleasingly.

My neighbor to the south has the ultra final word on how the modern home should look. Highly paid experts have seen that not one color disturbs another. They selected his pictures and a few choice expensive gimcracks and placed them exactly as they should be placed and there they remain.

The fact that Neighbor South put not one bit of himself into

it bothers him not in the least. I prefer the sentiment of my neighbor north. I enjoy the friendly atmosphere of his living room in which every piece reflects his fondness although I sometimes wish it did not resemble so much a museum of bric-a-brac.

Not many of us have had the opportunity to study the art of interior decoration and only a fortunate few seem to have a natural born color sense and an instinct for arrangement. Nor can we all afford to hire the talent to do it for us. But we can observe or learn by rule or even copy.

Most of us want to make our homes attractive in the present day accepted styles and please not only our personal tastes but those of our friends as well.

STABLE-KEEPER HELPS HORSES BY DEVICE

One keeper of a boarding stable for riding horses devised this simple automatic waterer for the convenience of his charges.

It consists simply of a discarded hot-water tank cut away and connected directly to the water supply, which is controlled by a float valve. The support for the tank is a sturdy frame made from pipe. Legs are aplayed to prevent easy overturning and braces and stretchers are welded in place to obtain rigidity. A pipe plug in the cold-water inlet makes it easy to drain and flush the tank periodically.

Building Program America's Largest

\$95 To \$100 Millions Work Here Largest Per Capita

Edmonton's 1950 construction program will outstrip that of any city in North America, on a per-capita dollar basis.

A survey today shows buildings worth from \$85,000,000 to \$100,000,000 will be under way here this year.

This total will be boosted another \$28,000,000 if First New Amsterdam Corporation and the City of Edmonton agree to the Detwiler scheme for developing the city centre. L. E. Detwiler says a deal permitting a start is imminent.

City building permits are expected to surpass last year's record \$40,050,000 total by as much as \$10,000,000, even without the city centre development.

\$20 MILLION CARRYOVER

Last year's carryover of approximately \$20,000,000 worth of construction will be driven to completion this year.

A \$32,000,000 building program will get underway in the industrial area east of the city limits, south of the river.

Edmonton Pulp and Paper Mills Ltd. will start building a \$14,000,000 mill. McColl-Frontenac (Oil Co. will begin work on its \$10,000,000 refinery and British-American Oil Co. plans an early start on an \$8,000,000 refinery.

'MAC' EXTENSION

In the city, Canadian National Railways is pressing construction of its \$5,000,000 tower extension to the Macdonald hotel.

Three other hotels are expected to be built, adding \$3,000,000 to the year's permits. Cristall brothers are expected to arrive at a suitable tax compromise with the city and start building a \$1,500,000 structure at 102 avenue and 101A street.

Fort Edmonton hotel, costing \$1,200,000, should get under way shortly at Jasper and 108 street, and an early start on the Gardiner hotel is planned at 82 avenue and 104 street.

Private housing construction should add a minimum of \$20,000,000 to this year's figure, providing the city's town planning department gets new neighborhood subdivisions laid out in good time.

Contractors are reported able to handle about 2,500 new homes this year, together with last year's carryover of uncompleted houses.

STORE EXPANSION

Department store expansion will entail several millions of dollars, dependent upon what transpires on the Detwiler city centre scheme. It is understood operators are awaiting its outcome before finalizing their plans.

T. Eaton Company has already

embarked on a \$1,000,000 third-storey addition to its store at 108 avenue and 101 street.

Woodward Stores (Edmonton) is tentatively planning a \$2,000,000 South Side store on 82 avenue, and a new main warehouse on the South Side.

Army and Navy Stores are now completing a new South Side retail outlet at 104 street and 88 avenue.

The city's educational system is slated for a \$6,000,000 building program, and the Separate School Board is contemplating \$450,000 in new construction.

University of Alberta is pushing its current \$6,000,000 building program, including hospital extensions, Rutherford Memorial Library, Students' Union building, and provincial laboratory.

City churches plan a \$2,000,000 building program.

INDUSTRIAL WORK

A major construction program is planned for the city's new industrial areas, with a large part earmarked for the Kingsway area, adjacent to the CNR line past the airport.

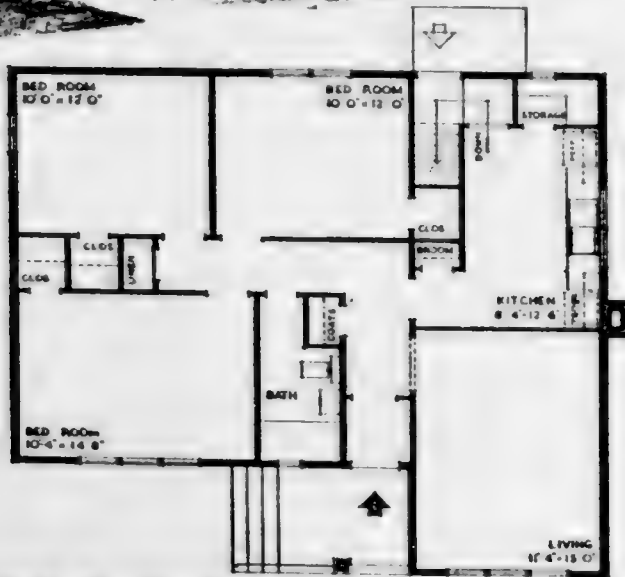

Included in it are projects by Weston Bakeries Ltd., with a \$1,250,000 plant, an \$800,000 Coca-Cola plant, a \$250,000 Crane Ltd. building, a \$225,000 Alberta Co-operative Wholesale Association Ltd. warehouse, a \$150,000 Kraft Foods Ltd. warehouse, a \$150,000 Dominion Rubber Company Ltd. warehouse, and a \$150,000 Firestone Rubber Co. Ltd. warehouse.

Other companies planning major construction jobs include Edco (Canada) Ltd., with a steel plant to cost an eventual \$1,000,000, and another still anonymous steel fabricating concern planning to build a million-dollar plant in a new industrial site being opened up between 90 and 97 streets, south of the CNR right-of-way to 125 street.

Almost two dozen oil equipment firms are planning to build on the South Side this year.

The city itself will contribute a building expenditure of almost \$1,500,000 with a new South Side ETS bus garage, fire alarm communications building and other structures.

Two new major downtown theatres, one for Famous Players and the second for Odeon, will be built.

DESIGNED by Roland Dumais, this attractive frame bungalow contains three large bedrooms with ample closet space. Living room projects a few feet at front of the house, doing away with box-like appearance. Convenient working area with a minimum of waste space is the keynote of the kitchen-dinette. House is 37 feet wide and requires a lot of approximately 45 feet.

Spray Gun Use Told In Steps

Tedious Part of Painting Is Eliminated by Using Spray

Painting can be a tedious chore, especially if you have large surfaces to cover. Yet if you use a spray gun, the job can be completed in a very short time with the minimum of trouble. Many people dismiss spray painting as being all right for the professional but not very practical when it comes to "my little bit of painting."

You need not invest in an elaborate, powerful spray outfit. There are small one quarter h.p. units on the market which are ideal for the jobs that have to be tackled in the home.

These spray guns sell for about \$33. On top of this you need a motor which would cost about \$10 for a reconditioned one, or about \$20 if new.

RENT AN OUTFIT

If you haven't too much spraying to do you may be able to rent an outfit from your local hardware or paint store.

Briefly, to make a spray gun work there must be a flow of air combined with the flow of paint. These guns bleed air all the time the compressor operates.

In other words, when you release the trigger the paint flow stops, but the gun continues to bleed air.

PRACTICAL, ECONOMICAL

This means that you do not need special air storage equipment, so that the portable spray gun is both practical and economical to use.

The most difficult part about spray painting is the actual preparation of the surfaces. This has to be done, of course, whether you are using a spray gun or painting the surface by hand.

Once this is prepared, however, the rest is easy.

FEW DETAILS

There are just a few details that you must keep in mind, but having mastered these you should become quite expert after a little practice.

The amateur spray painter would be advised to confine his efforts to outside jobs.

For close-in work a light mask will help keep fine spray clouds from your nose and mouth.

REASONABLE SPEED

The paint should be as thick as the gun will handle with reasonable speed. If the paint is too thin it will cause some mist and will have a tendency to run after it

'Good' Cheap Knives Not On Market

There are no "good" cheap knives on the market now.

Knives of poor quality are a waste of money, whereas cutlery of high quality will last for years and years. In a well made knife the blade extends the entire length or half the length of the handle and is fastened by 2 or 3 good sized rivets.

Blades which hold a keen cutting edge are made of high carbon and vanadium steel. The high carbon content produces a blade which will take and hold a razor sharp edge.

PREVENTS RUSTING

Stainless steel blades are made of steel, nickel and chromium alloy. The chromium content prevents rusting.

Forged blades are best and can be recognized as tapering from handle to point and from back to cutting edge. These blades have greater strength at the handle and flexibility nearer the tip of the knife.

Hollow ground (like old fashioned straight razor) blades are preferable for general purposes. These concave ground blades have been ground almost half the width of the blade and are easy to sharpen, and hold a good edge.

VARIOUS HANDLES

Handles come in fine grained hard wood, metal, hard rubber or molded plastic.

Test the knife for balance. A well made knife should feel comfortable and easy to use.

Ingenious Way To Fool Ants

Sugar, jars of jam and small amounts of other foods used in the camp can be protected from ants by placing them in covered cans suspended from the cabin ceiling.

Cut sections of dowel just long enough to fit between the sides of the cans, so that they engage

the rims, and tie lengths of cord to the dowels.

Slip cardboard disks over the cord to provide covers for the cans and hang the cord from hooks turned into the ceiling.

To obtain the food from the cans, simply raise the covers a few inches and tilt the dowels to disengage them from under the rims of the cans.

Yellow Paint Found To Repel Houseflies

An English journal on decoration gives an account of the practice of painting walls yellow to repel houseflies. It is said that a food factory employs this practice with successful results and that a house owner found the experience equally satisfactory when applied to the pantry of his home.

FIRST FLOOR

SECOND FLOOR

HERE IS A MODERNIZED Colonial one-and-a-half-storey, six-room house with basement. Exterior finish is brick veneer for walls with asbestos shingle or wood siding on the gable ends. Exterior dimensions are 31'10" by 25'9". First floor has an area of 820 square feet and second floor 435 square feet, giving a total area of 1,255 square feet for estimating purposes.

Building Inspector Wise To Wool-Pulling Tries

Trying to pull the wool over the building inspector's eyes always boomerangs.

Whether it's estimating projected house cost low to avoid paying a larger permit fee or inadvertently building on someone else's property, the city architect and building inspector's office catches up with it in the end, often at additional expense to the builder.

The process starts when a prospective home buyer submits two sets of complete working drawings of the building to the office of the city architect and building inspector.

MUST CONFORM

These are checked by town consultant with the building bylaw and with reference to work generally and must conform with all requirements and then in the city's building code, building permit is issued.

No construction can be started until the building is approved. If any change or addition to the drawings may be undertaken before the permit is issued, the building permit is void.

Let's assume in the plan book with minimum requirements, and the checker approves them for a permit. Cost of the permit is \$1 for total value of \$500 and \$2 per thousand value over \$500. Over that cost is \$1 per thousand of value.

MUST BE SWORN

Swearing in a \$1000 estimate for a \$10,000 home won't work, either, is getting a cheap permit because, when the house is completed, a certificate of occupancy must be sworn before a notary public, attesting to actual construction cost.

The discrepancy revealed, an adjusting permit must then be taken out at additional cost.

A new stipulation has been added this year to permit requirements, officials say.

PROOF OF OWNERSHIP

To obviate mistakes in property, a proof of ownership, or receipt for payment, on the lot must be

submitted to the building inspector before a permit is issued. "So many people were inadvertently building on someone else's property in mistake for their own that we simply had to add this provision to stop it," according to the department.

Economy Is Possible

To achieve a small house design that will be both practical and pleasant, offering at the same time a reasonably high degree of comfort and sanitation adherence to the following basic principles will ensure a minimum of discomfort within a minimum of cost.

1. The outer boundary of the house should be rectangular in shape, avoiding all breaks in line except at the corners of the rectangle.

2. The total length should be so far as possible, reduced to the minimum required to enclose a given floor area.

3. Interior framing and partitioning should be designed to eliminate as many corners as possible.

4. Standard lengths of lumber should be used throughout in the floor, ceiling, roof, and wall members, except where cutting is required to form gables and to frame around stairs and chimneys. Room sizes should be planned to permit the use of standard lengths to avoid waste.

5. Standard stock items of mill-work can be used to obtain benefit of factory fabrication where possible.

6. Plumbing lines should be concentrated, kitchen and bath being back-to-back in one storey plans and above one another in two-storey plans.

IF ENLARGING HOME, THEN THINK TWICE

It may pay to think twice before planning a house with an expansion attic.

Will you ever finish off extra rooms upstairs, or will that prove to be just a dream while you pay \$3 or \$4 every month on your mortgage payments because of that extra space?

Architects have figured that to be the cost of carrying the additional cubage required for a few planned roof with more storage space under the eaves.

The Dime Savings Bank, Brooklyn, N.Y., made a sample check of 131 home buyers in a pre-war Long Island development and found that 42 per cent made no use of expansion provisions, only 31 per cent added one room, nine per cent added two rooms and 18 per cent added three or more rooms.

Curtain Rods On Way Out

Curtain rods seem to be on their way out, and along with them the hazards of fastening on stepladder or chair while hanging drapes and valances.

A new contrivance being distributed through decorators offers an easy way to hang curtains from the floor. It comprises rails along the window frame on which the cross bar holding the curtains slides up and down. This makes it possible to lower drapes, valance and glass curtains to change them or adjust them, raise them again, or swing them open for window cleaning and ventilation, while both feet are planted firmly on the floor.

The entire device is easily put up with two screws on each side, top and bottom. Sinking or stretching of curtains after cleaning can be compensated for by lowering the support bar a fraction of an inch.

Hardware Marks House Quality

Solid Brass, Bronze Favorite Metals In Top Construction

Hardware is much more important to your house than buttons and fasteners are to your clothes, for the hinges, latches, knobs, locks and all the details that make up the hardware for a house must be expected to work unfailingly and to last for the lifetime of the house.

Care Needed In Selection Of Furniture

Even if it's only one or two rooms, which is the case more often today than any other time in Canada's history, they can be made more livable by the addition of a well-chosen selection of furniture and some good advice about drapes and hangings.

No matter how small your apartment or rooms, you will want a favorite chair and a small table that can be placed nearby.

They are cosy things that one can keep close to them no matter where they may have to temporise with the ideal home setting.

Conditions today demand that many persons crowd themselves, but that does not mean that they must be without all the comforts of their former home. Let your furniture dealer advise you what to buy that will brighten up the rented room or apartment. He is aware of your problem. That's his business—to make sure you get the most of your money.

GOOD LAMP

Besides that chair and table, you should have a good lamp to read by. Good lighting is so elementary nowadays that surely no one is going to deliberately endanger eyesight by overlooking proper illumination. Sometimes only one piece of furniture is necessary to make over an entire room. Why not try it?

Don't overlook the floors. Often the basic atmosphere of a room can be entirely changed by a proper choosing of floor coverings.

If the room is to serve two purposes, have it covered with two coverings. This serves to divide and conquer the absence of walls. Let your dealer suggest the right covers for bedrooms and rugs.

Don't overlook the usefulness of small rugs and rag mats.

Perhaps one of the most trouble-

For this reason solid brass and bronze have always been the favorite metals in quality construction. Since the war the production of solid brass and bronze has increased greatly and the National Contract Hardware Association reports that home buyers are noticeably more wary of plated substitutes.

PRICE DIFFERENTIAL

The price differential between plated steel and solid non-ferrous materials also is being steadily shaved down.

Builders hardware of non-ferrous metals is made both in cast and wrought methods. Wrought escutcheons and knobs are now stamped out of heavy gauge material and have all the appearance of the more expensive items. In fact, some lock manufacturers are featuring wrought solid brass knobs and roses over cast products.

BEWARE OF RUST

Plated steel hardware often is purchased without the realization that the material will rust within a very short time. Hardware is difficult to replace because of the various mortising and cuttings in doors and frames. A good way for the amateur to identify solid brass from plated steel is to carry a small magnet, which will adhere to steel, but not to solid brass.

ALLOW WIDE USE

John R. Schoemer, managing director of the National Contract Hardware Association, points out that the new types of tubular and nut locks now on the market allow for a wide use of wrought solid brass and bronze.

"I believe that it is only a question of time," Schoemer says, "before all of these tubular locks will be sold mainly of the wrought material."

Hinges, which can be primed and painted, and are obscured from view, can be of steel, but if the budget allows for brass or bronze, so much the better.

Some problems in the small room is table accommodation. This is where your dealer can really be of help.

Tile Is Winning Favor In Modern Houses

It's pretty, but what does it do? This is a question asked more and more by budget-conscious buyers—and a good question, too.

When it comes to clay tile, this question brings out one of the long-term savings in home building that can't be measured in original outlay. Tile offers a long-lasting finish. It is a material that has been in use for some 7,000 years.

Until a few years ago, tile in Canadian homes was used primarily in bathrooms and kitchens. In the modern home it can be found in many rooms—even dining room floors and floors of patios and porches.

MANY COLORS USED

Clay tile is now made in an almost infinite variety of designs and colors. Mother Goose and animal cracker patterns are available for children's rooms and table tops. Wallpaper designs can be used in bathrooms. Decorated panels forming mosaic pictures can be set into kitchen walls. Old Dutch designs are reproduced for fireplace borders.

You can have tile handpainted and custom made for your fireplace facings, mural panels or other uses. Warner Press, New

York artist, points out that such tiles are originals and fit in with other objects of modern art in the home. They are painted so that the metal oxides flow in true ceramic fashion and penetrate the pores of the clay body. Then a neutral glaze unifies the work.

MAKE PLAQUES ALSO

The artist has carried made-to-order designs into terra-cotta plaques for patios and hall murals with paintings under weatherproof glazes. These plaques are made in large sizes up to 40-inch squares.

Floor tiles of the faience type are being made commercially in large oversize squares with a highly glazed iridescent finish in deep colors.

The lack of any need for maintenance is one of the virtues of tile.

That Summer Home Requires Planning

Many Points to Consider In Purchase of Cottage

How often have you heard men in the 50's say, "If I had my life over again, I would buy a summer cottage where I could bring up my children and give them something to look back on."

If you're thinking about buying a summer home this year, you had better not delay, especially if you want to get the full enjoyment out of it this season.

First, you should consider what sort of a place you want.

There is no general rule. What will suit one person will not suit another.

Some people like a summer home in the wilds where they can be far from the crowds.

Others prefer to be near a town or even within driving distance of the city. Still others consider that their summer home is not complete unless they have good fishing and a golf course within easy reach.

GENERAL RULES

No matter what your preferences may be there are certain general conditions which will help you to decide.

There is, first of all, the district and the distance from your permanent home. Then you have to consider the type of lot and the type of cottage.

For the average busy man who gets only two or three weeks holiday in the summer, it's a big consideration to have his summer

home located so that he can spend his week ends there.

Don't forget that summer cottages often lack fire protection, other than insurance. Built of wood, there is small chance of saving it if a fire starts. Planning for cooking and lighting will materially reduce the risk.

The rates charged for electricity in most rural districts are quite reasonable.

NEED POWER

If there is no power line near you, you will probably have to use kerosene of gasoline, wood or coal for cooking and heating. This will affect the kind of equipment

you buy. Of course, a fireplace is a big asset in a summer cottage—for general heating, appearance and just for the fun of it. Many people are willing to pay a considerable premium for cottages with good fireplaces, and you have to remember that you want to sell the cottage some day.

How are you going to get your drinking water?

Many lakes contain good pure water which can be drunk without danger, but even in such cases the water is always subject to contamination and many people prefer to boil it for drinking.

You may prefer to get water from a private spring, or even to drill for a well on your lot.

You will find that it saves a

great deal if you have water close by.

Carrying water for a mile or more takes away a lot of the pleasure of your holidays.

CO-OP WELLS

In some cases, cottages form an association and drill one or more community wells, sharing the expense and thus solving their problems.

Now, about the building itself. Remember that in an area which has been a holiday district for some time, the cottages are probably dated and the type of architecture and the building itself may be 40 to 50 years old.

The main consideration is that it be weatherproof.

GLASS . . .

IS "STEALING THE SHOW"

In MODERN HOME-BUILDING

Glass in any home is functional, practical, and very modern. It may easily be used to break up a wall area in a way both inexpensive and decorative. Plan to make full use of any one or all of these Pilkington Glass products . . . Insulux GLASS BLOCKS, THERMOPANE Double Glazed Units or charming, distinctive MIRRORS!

New Window Idea Gains

Windows are no longer merely a means of providing light and ventilation in both the new and remodelled homes. The form-dead, decorative, steel panels, allowing the sun's rays and in...

...the sun's rays and in...

The new window that gives a picture window a name is one of these. The new window is made through French doors and awning type upper panels that open off ceiling heat is another advantage. But the decorative appeal through light, color and draperies is not to be disparaged.

GAINS POPULARITY

A smart California idea that is gaining popularity in every state is a big window made up of mullions and muntins of 2x4 construction. Sturdy and functional, this design offers several attractions. It simulates the use of insulating panes in smaller sizes. It forms a picture window with upper panes that can be opened for ventilation. And its framework provides nifty shelf space for the display of American glassware, potted plants and other accessories.

First Impulses Are Dangerous

Reset the first impulse to pour on water when fire breaks out in the home warn fire authorities. When fire occurs in or around electrical equipment, never use water or other fire extinguishers until the electric current is cut off completely at the switch.

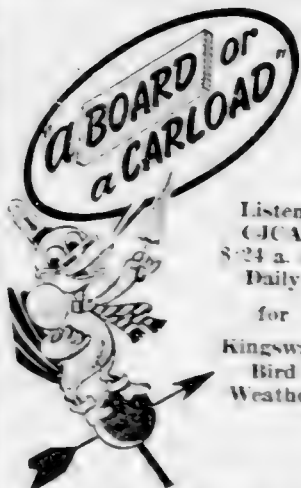

Be sure all members of the family know how to "throw" or "pull" the main switch to render the wiring system in case of fire emergency. When the electricity is turned off, the proper extinguisher can be applied to the fire. Wire inside motors and other electrical equipment are covered with insulating material which burns like an oily rag.

Mental Illness Can Be Cured

Mental illness is just as real and just as dangerous to the patient as physical illness, and often far more difficult to diagnose and cure. Most Canadians now realize that mental illness should not be the object of ridicule or distaste but of sympathy and understanding. Mental illness is a disease and, like other diseases, can often be cured when expert medical attention is available in time.

Sticky Soleplate

To clean a sticky iron, rub it over a layer of salt sprinkled on heavy paper. Wipe it with a beeswax pad. Be sure to rub thoroughly with dry cloth to remove any wax.

Kingsway and 101st Street

THIS TWO-BEDROOM bungalow is designed for the small family of three or four. Economical to build, this popular Canadian-styled dwelling has many distinctive features, including a low, modern roof-line and wide corner windows. Large living room area is 17'8" by 11'8" and is adjacent to kitchen. Bright and airy kitchen is well lighted by two windows and is provided with ample cupboard space. Two bedrooms, which are ideally located on the same side of the house, are within easy reach of the modern bathroom.

Wood Needs Treatment To Add Life To Home

By treating wood used in home construction with chemicals, the life of the dwelling can be extended, maintenance costs cut and a higher resale price made more likely.

City Bylaw Study Urged For Owners

Prospective home builders who think the number and size of the windows they propose to have in their home is strictly their own business would do well to study city bylaw requirements before getting too far with plan preparations.

Here is a digest of minimum sizes, compiled with cooperation of the city architect and building inspector's office.

Each room must have one or more windows opening directly on a street or yard.

Aggregate unobstructed glass area must be not less than one-tenth of the floor area of the room served by the window or windows.

SHALL BE HINGED
At least half this required glass area shall be hinged or sliding to permit opening to the outside for ventilation, provided that where fixed glass is used, a louvered or other suitable type of ventilator which will supply equivalent ventilation, may be substituted.

The condition for opening shall not apply to windows in living rooms otherwise adequately provided with ventilation facilities.

Outside windows may be omitted in bathrooms and toilet rooms where a ventilating shaft connected to the outside atmosphere is provided, and in breakfast or kitchen alcoves, pantries and storage rooms with floor area not exceeding 40 square feet, if they are ventilated.

Where storm sashes are provided they must have an aggregate net area arranged to open of not less than one-eighth of the required glass area.

Skylights are prohibited.

In case you have a bright idea for lighting your new home with some new form of cosmic or atomic illumination, it might be well to note that the building bylaw says all property served by public electrical distribution must have any dwelling on it connected up with the system.

And one or more lighting outlets or fixtures must be provided at suitable locations in all habitable rooms and bathrooms.

The 1938 parliament passed an amending act providing that all directors of the Bank of Canada be appointed by the government and the entire capital be owned by the Dominion of Canada.

CITY BOOMING Past Decade Sees Record Housebuilding

More has been accomplished in Edmonton house construction during the past decade than ever before in the city's history, according to A. C. Ross, secretary of the Property Owners' association.

Quoting figures prepared by city commissioner John Hodgson, Mr. Ross said that while the number of building permits and total value has increased steadily every year since 1940, average cost per house has jumped from \$1,944 in 1940 to \$6,947 in 1949.

During the 10-year period 12,881 new homes were built plus 1,392 apartment suites and 1,500 converted housing units.

While average number of persons per dwelling unit was 3.2 in 1940, and rose to 8.2 in 1943, it has subsided now to 3.7 persons per unit.

Total number of dwelling units in the city is now 36,775, with a population of 137,469, according to Mr. Ross.

During the past 10 years population has increased by more than 46,000.

Georgia is the United States' largest producer of kaolin for use as a paper and china clay.

Building experts point out that today house construction has undergone serious basic changes that are too little realized by the average buyer. Due to an increasing number of technical improvements, like the treated wood, some homes end up half modern and half obsolete.

"This can cause the owner severe financial losses," one large builder said.

THREE QUESTIONS

To avoid such a fix there are three questions a prospective home owner should ask:

1. Is it built of the right materials to make it last longer?
2. Is it reasonably sure there will be no heavy maintenance costs in a few years?
3. Is the house so constructed that it will bring a high resale price?

SEEK ARCHITECT'S AID

The owners can get these assurances by hiring the services of an architect, since buildings planned by architects nearly always meet the requirements set out in the three questions. By using an architect, the prospective builder can be certain of getting progressive materials, heating, plumbing, insulation, methods of construction and finish.

If architects aren't available, reliable contractors are quality-minded and will usually assure the prospective buyer. Most of the large-scale building and sales organizations are completely reliable on the three-question test due to improved building practices and requirements of NHA and other financing organizations.

Improvements in the science of wood protection have made it possible to double triple and even quadruple the life span of the wood backbone in any new building. By treating the wood with these new chemicals, it is possible also to repel attacks of wood destroying insects and prevent decay due to excess moisture.

TWO METHODS

The chemical solution often used today is pentachlorophenol, which can be used to treat wood by either of two methods. As a solution it can be forced into the wood with high pressures or it can be soaked in an open tank.

Satisfactory results for home construction are obtained by a soaking treatment inexpensively performed at the local lumber yard. Wood so treated is not only protected against decay and insect attack but also resists checking, warping and other faults associated with varying moisture content.

24 Specifications For Small Houses

Check Plans Against These Before You Start Building

According to general practice and experience, a sound small house should be able to meet the following specifications:

1. The cost of the land with water, sewers, other utilities, curbs and streets installed, should not amount to more than one-fifth of the total price of house and lot.
2. The neighborhood should be residentially zoned and built up with homes in approximately the same price class.
3. The appearance of the house should be acceptable to others, indicating a sound resale value.
4. The front door should be heavy and sturdy, open without shaking, and equipped with solid brass or bronze (weatherproof) hardware.
5. There should be either an entrance vestibule or a covered doorway.
6. Rooms should be large enough with wall spaces adequate for average furniture. Windows should be well arranged for light and cross ventilation.
7. Kitchen equipment should be adequate and specified so you will know what items you may have to buy extra.
8. Bathroom fixtures should be in good condition and working order.
9. Plumbing lines should be able to withstand corrosive effects of local water conditions.
10. Purpose of attic space should be understood, whether it is designed for additional rooms or storage space under the rafters.
11. An expansion attic should have floor joists strong enough to bear the added weight. Joist sizes depend on the length of the span.
12. The house should be served preferably by sewers or by septic tank instead of cess-pool.
13. The cellar should be dry even after a heavy rain. Foundation should show no sign of crumbling.
14. If the house is built on a concrete slab, the slab should be insulated around the edges between the slab and foundation footings, with insulation extending down below the frost line.
15. If the house is built with a crawl space instead of cellar, the crawl space should be well ventilated and the floor insulated.
16. The heating plant should be able to pass inspection by an impartial heating engineer.
17. Floor joists visible from the basement should have lagging cross pieces or short boards to strengthen the floor.
18. Subflooring visible between joists is superior when laid diagonally rather than at right angles.
19. Steel columns are preferred to wood for supporting beams over basement if wood is used it should stand on a separate footing raised from the basement floor.
20. Basement windows should be set in masonry areaways well drained.
21. All ceilings should be free of water stains which indicate roof leaks.
22. Roof visible from attic should be light tight with no panholes showing.
23. Roofing should be in good condition. Most storage roofs need replacing in about 20 years.
24. Roof should have adequate gutters and leaders, preferably rust proof and not pecked, or eaves overhauled far enough to keep water away from foundation.

"AN IDEAL HOME for small family—compact, comfortable and economical," is what one builder had to say about this two-bedroom bungalow. Designed for gracious living and featuring a highly original room layout, this house is a popular choice with Canadian home-builders.

Time-Payment House Plan Is Put Forward

A plan to put home improvements within the reach of the average householder through time payments is to be put into operation by a group of Canadian lumber dealers.

TWO COATS BEST FOR FURNITURE

In finishing furniture, as in any other type of paint application job, two thin coats are better than one thick one. The reason is simple, evolving out of the drying process of the varnish. When a heavy coat is applied, the surface varnish dries and seals over, so that solvent is trapped underneath and the air can't get in to oxidize the oils. The entire drying process is interfered with so that the varnish checks.

Drum-Type Feeder Anchored To Platform

One successful hog raiser prefers this type of self-feeder for use in small feed lots. It takes up the minimum of space for the amount of feed dispensed and it can be anchored to a concrete platform, thus promoting cleanliness and preventing the hogs from upsetting it. The hopper is a 55-gal oil drum with the ends cut out. A flat-iron implement, which has a single row of spokes forming the compartment feed tray. Select a wheel with a rim about twice the diameter of the drum. The latter is attached to the wheel spokes by passing a wire around each spoke and through a hole drilled in the drum near the rim. Each length of wire is tightly twisted to hold the drum firmly in place. As the concrete platform is poured, a length of pipe is placed upright in the center of the form as shown in the detail sketch. When the feeder is set up, the wheel is slipped over the end of the projecting pipe. If desired, the hopper can be fitted with a sheet metal or wooden cover to protect the dry feed in bad weather.

The organization, to be Canada-wide in scope, will finance all phases of improvements, including lumber, building supplies and labor.

Formation of a million-dollar company to handle the financing has been announced by organizer Maurice B. Dix, secretary-manager of the B.C. Lumber Survey and National Retail Lumbermen's Council of Canada.

TO EASE FINANCING

Mr. Dix explained that urgently needed home expansion projects have been denied thousands of Canadians by the lack of financing facilities.

The new plan, he pointed out, will enable families to budget for home improvements on the same basis as for furniture and automobiles.

Some projects for which the financing will be available are modernizing of kitchens and bathrooms, additions of rooms, installation of new floors, recreation rooms, garages and insulation.

The plan includes a scheme whereby the home-owners may buy a packaged job including labor, with payments spread over a period of two years. It is also pointed out that endusers will not be necessary.

Board of directors of the new company, to be formed by prominent lumber dealers from the territories, Quebec, Ontario, the prairies and British Columbia.

Mr. Dix said lumber dealers are enthusiastic about the arrangement and expected to be in operation by next year.

Teeth Should Be Brushed After Meal

Brushing the teeth has long been a standard part of hygienic maintenance, but dentists now know that brushing does little to prevent tooth decay unless it is done immediately after each meal. But even regular brushing is not the complete answer... see your dentist at least twice a year to check.

Sewer Stoppages Caused Variously

Plain Dirt, Grease, Rodents Are Few of Several Reasons

Have you ever surveyed your flooded basement from the stairway and wondered what sort of animal, vegetable, or mineral had clogged the sewer line? Many times it is just plain dirt or grease. Occasionally a confused rodent has run down the wrong hole and started the trouble.

Except for the offending rodent, such stoppages can be covered up by reasonable attention to what goes down the plumbing fixture drains. Dirt and rodents can usually be cleaned out rather quickly with drain cleaners and plumbing snakes.

But there is one cause of basement high-water marks that is more difficult to control... tree roots.

NEVER-ENDING SEARCH

They wage a never-ending search for water, and grow in the direction of the dampest ground, a brook close by, or a low spot where water collects in the slightest rain.

If there's a sewer drain near at hand, roots don't hesitate a minute to make full use of that oasis.

Although most sewer lines today are initially impervious to roots, soil settlement tends to work the joints loose, and leave small fissures where thirsty roots may enter. That's why trees are quite often associated with drainage lines.

WIDEN FISSURES

Once the roots are in the pipe, they send out thousands of root hairs which grow larger, widen the fissures, grow more hairs, and form a tangled mass which eventually stops the flow of water in the pipe.

There are a number of ways of uncorking a line that's plugged with roots. Chemical preparations

are available which are designed to disintegrate the root mass.

Digging down to the clogged line to repair it is always a sure cure.

CLEANING SERVICE

And there are sewer cleaning service men who have special equipment to cut the root mass out of the pipe without digging.

This last method is the quickest, easiest, and surest method of attack on the stoppage.

With a clear sewer line, root growth can be reduced or eliminated by periodic use of chemicals.

SPECIAL PREPARATIONS

Special preparations are available and copper sulphate can be used in a solution of three pounds to a bucket of water flushed down the toilet every two or three weeks during the growing season.

Once a month or so will suffice in the winter.

The next time the sewer starts to drain sluggishly, don't wait for a flood. Get the stoppage removed, no matter what type it is.

Much of the pain, discomfort and poor appearance due to unhealthy teeth is preventable. Dental care should begin at an early age and children should be taught to brush their teeth carefully after every meal. A visit to the dentist at least twice a year is a "must" in a dental care program.

Financing Family Home Discussed

If Willing To Sacrifice, Most Rules Need Not Apply

How much of a home can a family afford?

In the last analysis it depends on the family. If your family is thrifty and willing to sacrifice for a home, that is one story. But if you are accustomed to luxuries, recent budgeting your expenses, frequently fail to make ends meet and resort to borrowing before payday, look out.

Then again, it depends on what you start with—your own savings, or a legacy, or other money easily come by.

For the average family, starting virtually from scratch and in debt earnest on owning a home there are some rules, even though the best rule is to figure it out yourself.

It used to be figured that a house priced between one-and-a-half and two-and-a-half times your annual income was a safe buy. But prices for houses, the cost of living and higher income taxes have changed this.

HAVE TROUBLE TODAY

The reason is that under such a rule a man earning \$60 a week would have been given the go ahead signal on a house costing from \$4,800 to \$7,200. Today he'd have a merry time finding a suitable house to meet the minimum figure and he'd have to have an unusually thrifty family in order to make ends meet under the maximum figure.

That rule would also permit a man earning \$100 a week to buy a house costing \$7,500 to \$15,000, and he'd probably have some trouble in swinging the maximum deal.

Then there was another rule that monthly payments, like rent, should not exceed one week's pay—or 25 per cent of monthly income. Since monthly carrying charges on a 20 year mortgage, plus real estate taxes, water charges and fire insurance, could be figured roughly to amount to one per cent of the amount of the mortgage, this rule made it easy to say that the \$60 a week man could carry a \$4,800 mortgage.

DIDN'T COVER UPKEEP

But those monthly payments did not cover heat, or upkeep, utilities, travel to and from work and other fixed charges. No when food, fuel and income taxes went up, and interest rates began to stiffen, this picture also changed.

A conservative banker recently said that when arranging mortgage loans he advises the average home buyer not to exceed 20 per cent of his monthly take-home pay when figuring what monthly payments he can afford comfortably.

Take-home pay is the only realistic basis on which to figure. There are so many deductions made from most pay cheques, and they vary so widely, that each family must figure this out individually.

The \$60-a-week man, who has a wife and two children, may have a take-home pay of \$57.90, if his income tax is the only deduction. The \$100-a-week man with the same size family may take home \$91.30 after income taxes.

But if hospitalization, pension contributions, group insurance, union dues and other deductions are made, the amount to figure on for home buying is much less.

Budgeting your home purchase in terms of take-home pay, or actual net income, is sounder than trying any rule to fit a total house price to your annual income.

VESTIBULES, STAIRS MUST BE CONFORMING

Vestibules, halls and stairs in new homes must conform with certain minimum standards laid down by the city building bylaw.

For the benefit of prospective builders drawing up their own plans or perusing sets of ready-made plans, here are the standards, prepared with cooperation of the city architect and building inspector's department.

Vestibules or entrance halls must be at least 3'6" wide and 3'6" deep and halls or passageways must be at least three feet wide.

All stairs must have uniform treads at least eight inches wide, with riser height of no more than eight inches. Recommended height is seven inches.

Headroom of at least 6'4" must be provided on all stairs measured vertically from nosing of the tread.

Clearance between handrails on main stairs must be at least 2'6". Clearance between enclosing partitions around main stairs must be at least three feet.

Clear width of stairs to attic storage space and basement shall not be less than 2'6".

Handrails must be provided on basement stairs and around stairwells of attic spaces.

Where winding stairs are required connecting two floor levels, two angled risers with three winding treads will be permitted for one 90 degree turn only.

"At last an ATTRACTIVE HOME ... that's OURS!"

Modern design these days can mean many things, but the main point of all architects and designers is comfort and economy. One of the many helpful hints that we stress today is the use of R.O.W. Windows. Call in and let us show you the advantages of these new R.O.W. Windows, as well as many other "economy facts" that our building experts are prepared to pass on to you!

Wash both sides of windows indoors

IT'S EASIER! SAVES MONEY!

• No more step-ladder dangers! No more outside window cleaning bills! Just give a gentle push on the left side of the R.O.W. Window and it lifts out from the right side. Easily put back the same way.

R.O.W. Windows slide in a metal spring cushion guide. They never stick; never rattle. R.O.W. means Removable—Open easily—Weatherstripped. And R.O.W.'s cost no more than other good wood window units!

Life is pleasant and household wheels turn more smoothly when one's family is tucked away in a house which features the last word in modern design.

Moth Damage Runs Into Many Millions

Proper Use of Repellants Requires Some Knowledge

Last year moths did thousands of dollars worth of damage in Canada. Some of those dollars were undoubtedly yours.

Moths and moth killers on the market but to use them effectively you must know something about moths and how to combat them.

The moths you see flying about lights are not the destructive ones. That kind, like the thieves they are, prefer darkness. You may find them living in dark corners or crawling into cracks.

MOTH NOT DANGER

The danger is not in the moth itself but you must remember she is going to lay between 100 and 300 eggs. The chances are excellent she is going to lay them on or near a food supply. For moths a balanced diet consists of wool, mohair, furs, feathers and articles made of these animal fibres. Young moth larvae have excellent appetites. Even if the eggs have been laid in a dark corner or next to the baseboard, nature has thoughtfully made it possible for the larvae to crawl. And crawl they will—right into your best cashmere.

HOW TO COMBAT MOTHS

Good housekeeping is the moth's worst enemy. He thrives on soiled furnishings and garments.

Woolen garments should be carefully cleaned and stored in sealed containers. They may be dry-cleaned, washed in a strong solution of soda soap or hung out of doors in strong sunlight and then thoroughly brushed.

Carpets, rugs and other home furnishings which are cleaned

use since moths thrive only when they have peace and quiet.

The two best ways for control are moth killing and repellents.

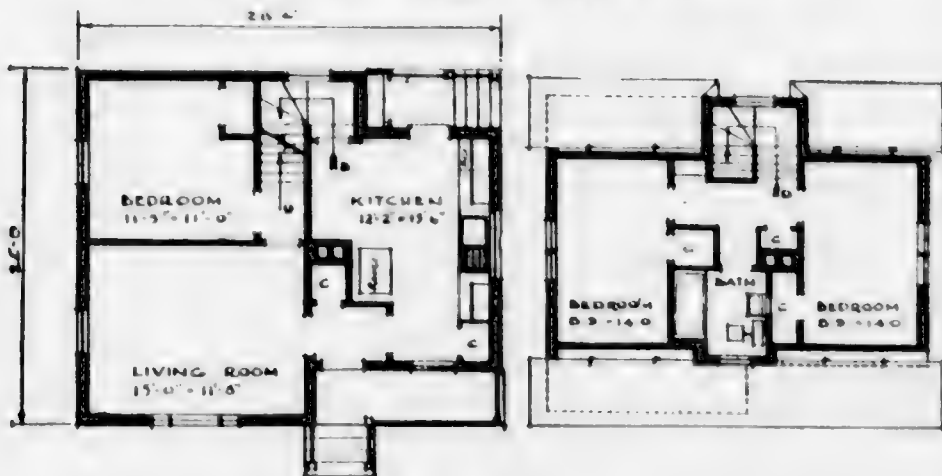

MOTH KILLERS

These may be powders, solids, liquids which give off a killing gas or fumes or a combination of two of these. The only powder that has much merit is pyrethrum. This comes of a plant which kills or paralyzes the moth larvae when it contacts them. To be effective it must be used when fresh. The articles you are treating must be thoroughly dusted with it and placed in a tight container or wrapped well in unbroken paper.

Fumigation with hydrocyanic acid gas is the most effective way to rid the whole house of moths. It is, however, poisonous and should only be handled by a licensed fumigator. The fumes from burning sulphur may also be used but they are not quite so effective. Liquids made of cedar oil, carbon disulphide, carbon tetrachloride or an ethylene dichloride-carbon tetrachloride mixture are also effective.

Cuts, Scratches Should Be Treated

Cuts and scratches are unimportant only when they are properly cared for. Even minor wounds should be carefully washed and sterilized and protected from dirt and germs. Carelessness may lead to infection which can often be

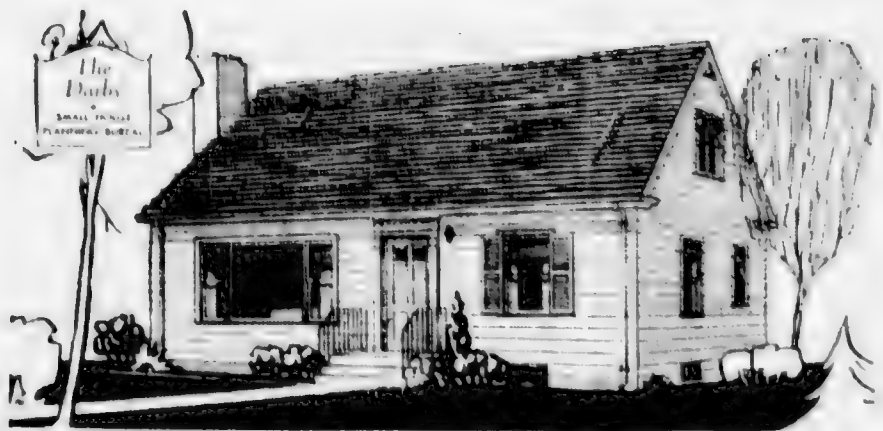

THIS one and a half storey house is very popular, especially in small towns and rural areas. It combines a pleasing exterior appearance with a simple and practical floor layout. Designed for comfortable living throughout the year, the plans include two porches and large, airy rooms, including three bedrooms.

Special Care Of Milk Is Needed

Special care should be taken of milk in the summer months. It should never be allowed to stand in the hot sun after the milkman has left it on the step. The bright sunlight and heat will destroy the cool, dark place

should never be allowed to stand in the hot sun after the milkman has left it on the step. The bright sunlight and heat will destroy the cool, dark place

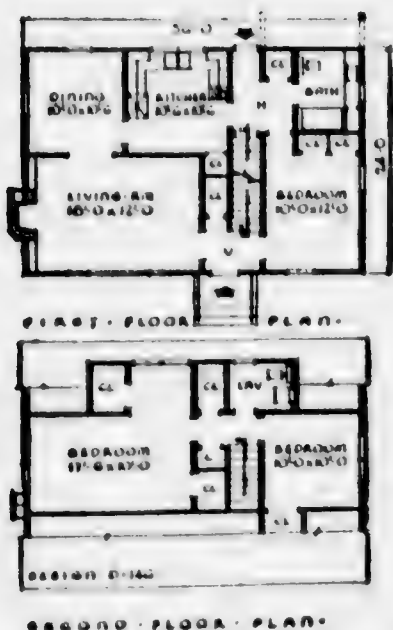

To all who want

A HOME of their own...

If you are contemplating a new home in your foreseeable future... we will be more than happy to assist you in any way. We have the know-how, the equipment and the skilled men to build a home that you will be proud to call your own!

Garden Walks Add Color To Home

Construction, Proportions Are Important Factors

Designers appreciate the importance of gardens as an essential part of home. The walks in these gardens need good construction and generous proportions, not only to fill their purely utilitarian functions but to form a pleasing part of garden composition.

Large quarry-tiles or flagstones can be laid directly on the ground. Use any stone which can easily be cut into inch and one-half or two-inch slabs. To make your walk, remove the sod and level the ground under it. If the large stones are not placed on a perfectly level base they will fracture. It is always advisable to set slabs in a permanent base. The distance between stones will be determined by the fill you intend to use between joints: cement, sand, moss, herbs or gravel. For pieces larger than 12 inches square provide a concrete base.

Old red quarry-tiles make a handsome walk. The old style tiles were larger, 8 to 10 inches across, and one to one and one-half inches thick. They make the best walks. Most quarry-tiles now being made are smaller but have a pleasing glazed finish on one side. Their rich red color provides fine contrast for garden greenery. Few other types of tiles are durable enough for use in walks.

BRICK-PAVED WALKS

A brick-paved walk is not only one of the most beautiful but about the most satisfactory. Contrary of general opinion, they are not unduly expensive. If you can lay the walk yourself, you'll find it pleasant work. Remove all soil for a depth of 12 inches. Fill in with 6 inches of firmly tamped cinders.

On top of this spread three inches of sand. Lay the bricks on in the pattern of your choice, then sweep sand into the space between bricks. If you want to make sure that frost won't lift the bricks, substitute a three-inch layer of concrete for the sand, allow it to set 24 hours. Spread on one inch of mortar, (one part cement to three parts sand) and lay the bricks on this damp base. When the mortar has set, sweep a mixture of dry cement and sand into the joints with broom and moss.

RANDOM STONES HELP

Random stones have long been the pets of landscape architects. The stones found in old-world gardens were originally neat rectangles but edges have been chipped off, resulting in stones of varied sizes and shapes. They were usually set on the unsodded ground, a comfortable stride's dis-

Food Freezer Poses Problem

Some architects contend that food freezers, unlike refrigerators, are opened so often that they might as well be located in the cellar, thereby saving that space in a kitchen.

One advantage of having the food freezer in the kitchen, however, is the proximity of the sink and range, both of which are needed in the freezing process.

By planning work surfaces next to the freezer you can prepare food and store it in the unit with a minimum of steps.

Aluminum Used In Grain Bins

Some \$3,000,000 bushels of grain of the 1948 harvest were saved from possible loss by the construction of nearly 25,000 aluminum grain bins, each with a capacity of 2,000 bushels. The bins were formed of strong, lightweight aluminum, light enough to be shipped and constructed with ease. It is anticipated that the aluminum with its capacity to reflect heat will protect the grain from deterioration. Since aluminum does not rust, maintenance costs should be at a minimum. The bins are filled by portable conveyors which empty into a central roof opening.

WORKBENCH IS SAFEGUARD

Safeguard against accidents at the home workbench by providing light where it is needed. If there is no light fixture directly over your working area try using a 150-watt reflector spotlight in a portable holder fastened to the wall.

These wall-type holders which may be hung on picture hooks are adjustable so that the bulb may be aimed on your work. If you're right-handed, place the spotlight to the left of your work area or vice versa if you're left-handed to eliminate harsh shadows.

Ventilating Fan In Attic Important

Attic ventilating fans should be large enough to change the air completely once every minute. Adequate ventilation is needed where any type of insulation is used. If a fan is not used, cross-ventilation should be provided through two openings, each having one square foot of opening for each 376 square feet of space to be ventilated.

Headaches Are Saved If Building Bylaws Known

Prospective home builders will save many headaches by acquainting themselves with certain requirements of Edmonton's building bylaw, particularly those relating to room dimensions and privacy.

Here is a digest of these specifications, prepared with co-operation of the city architect and building inspector's department.

Standard rooms shall comply with these requirements:

Living room, minimum floor area, 150 sq. ft., min. width 10'0". Dining room, 80 sq. ft., 8'0". Kitchen, 50 sq. ft., 5'0". First bedroom, 110 sq. ft., 9'0". Additional bedroom, 80 sq. ft., 7'0". Combination rooms shall comply with these dimensions:

Living and dining room, 190 sq. ft., 10'0". Living room and bedroom, 200 sq. ft., 10'0". Kitchen and dining room, 90 sq. ft., 7'0". Living room, dining room and

bedroom, 230 sq. ft., 10'0". Living room, dining room and kitchen, 230 sq. ft., 10'0".

A combination room must have no other division than a beam in the ceiling and/or cabinets not more than four feet high.

A kitchen or dining alcove must have a minimum floor area of 40 square feet and a depth not exceeding the width of the open side.

Ceiling heights shall not be less than the following:

Basement floors to underside of beams, 6'4" clear height.

Principal habitable rooms except bedrooms, 8'0" clear height.

Bedrooms and secondary habitable rooms, 7'6" clear height.

Sloping ceilings may be used in such rooms if at least 50 per cent of the floor area has a clear height of 7'8" and provided that any part of the floor over which clear height is less than 4'6" shall not be considered in computing minimum floor area.

PLUMBING & HEATING

10640 - 95 St.

Our kitchen was old-fashioned, cluttered, inconvenient and unattractive, no matter how often we painted it. We both spent a lot of time in the kitchen, and we wanted it modernized.

So we went through a lot of magazines until we found a picture of a kitchen we liked, and decided to copy it.

Our lumber dealer recommended covering the old tongue-and-groove walls and cracked plaster ceiling with fresh new Stonebord—the rigid plaster board that comes in sheets.

He told us Stonebord is easy to saw to the right shape and nail in place; the joints easy to conceal, leaving a smooth wall ready to paint or paper.

In just two weeks of my spare time, the job was finished. And if I do say so myself, it's quite a success. Fresh, clean walls and ceiling, not a joint showing anywhere.—it's cheerful-looking, and it's warm and comfortable.

All I did was nail the Stonebord sheets right over the old walls, then fill the joints with special filler. That left a perfectly smooth wall, ready for painting. And if we'd known how little it would cost, we'd have had our new kitchen years ago!

WATER OUT FOR HARDWOOD

The manufacturers of hardwood flooring do not, as a rule, approve the use of water on such flooring.

If floors have been recently varnished, it should be easy to clean them with one of the special cleaning preparations sold for this purpose. Or, they may be cleaned by wiping with cloth dampened with turpentine. Loose dust should first be taken up in the usual way, however.

Flooring manufacturers advise that a paste type of wax be used for protective coating. There are various methods of applying this—either with a lamb's wool applicator or in some other fashion. The wax must be applied in a very thin coat, permitted to dry hard and then polished.

A second coat may follow. There are various methods of polishing—with a lamb's wool applicator, a polishing weight or an electric polisher.

Safety First

A number of dry matches kept in readiness for emergency use on a camping trip, will come in handy if the regular supply of matches is ruined by rain or dampness. To protect the emergency matches from moisture, sand with each one between two strips of cellulose tape, pressing the edges of the tape tightly together.

Plan to instal a new

The Bendix washes clothes super-clean — rinses three times—changes its own water—damp dries clothes—cleans itself—shuts off. See it for yourself the easiest wash day on earth! The only automatic washer that's been performing these wash day miracles for eleven whole years! There's no question about the Bendix. It's been PROVED IN USE. Come into Campbell's for a demonstration now.

Bathrooms Need Storage Facilities

Toilet Supplies Should Be Handy When Needed

In spite of pleasing colors, gleaming tile and streamlined fixtures, many bathrooms fail to be efficient because they lack storage space. Supplies of soap, cleanser, linen, toothpaste and toiletries should be handy at all times. It's no problem with these handy built-ins.

1. The area on either side of the washbasin is an excellent space for storage. Face towels and supplies can be kept in convenient, inconspicuous cabinets built under the basin. If you extend the basin with counters, more cabinets can be built under the counters. Clay tile makes an excellent counter surface for it can't be harmed by spilled perfumes and the like. It will also prevent water seeping into the cabinets.

2. The wall over the water closet tank is often overlooked. Storage here is a more ambitious project for you will need a cabinet recessed into the wall between studs. Enough space must be left under the cabinet to permit plumbing repairs.

3. We never knew a husband who didn't object to wet laundry in the

bathroom and we never knew a wife who didn't do it.

To keep both sides happy you might buy a large chromium stand with bars. This should be set up vertically at one end of the tub. The racks are ideal for towels and face cloths but they do their best service for freshly washed stockings and lingerie.

4. Probably the most useful of all bathroom cupboards will be the one built from floor to ceiling. Three drawers at the bottom will store extra linens. Above that build as many shelves as you have space. The trick here is to make the shelves adjustable so you can change their height as your needs change.

5. It's hard to find space for a woman's vanity table in many of

today's small bathrooms. One solution to the problem is to build a counter at one side of the basin. Put a recessed well in the top to hold all cosmetics and give the well a hinged lid. A mirror tacked on the inside of the lid and a small chair for milady complete the project.

6. Sull on the subject of vanities. You will find you have too little space beside the basin but often there is a completely useless recessed area beside the tub or shower. Build a tiled counter at the proper level and hang a mirror above it. Fluorescent lighting at each side of the mirror is ideal but you could also use an overhead fixture.

Cotton Prints Ideal For Cottage Window

Colorful cotton prints make ideal curtaining for cottage windows in an informal room. Bright reds, yellows, purples, blues, and greens have high color interest; flounces match seat pads and provide the quaint touch so appropriate with antique furnishings.

Curtains such as these can be

drawn to give privacy from close neighbors. Two deep rows of ruffling were set above the curtain panels. For a more formal dining room, curtain high windows in simple straight panels of one of those unusual, modern-textured materials.

The Grand Canyon of the Colorado River in Arizona is 217 miles long, and has a width of from four to 16 miles.

WINDOW BOX NEEDS RICHNESS

Plants growing in window boxes, urns and hanging baskets will require richer soil, more water and more fertilizer. Suitable plants for a sunny position include geraniums, petunias, dwarf or trailing nasturtiums, dwarf marigold, ageratum, sweet alyssum, trailing vines like ivy. Suitable for a shady location are tuberousrooted begonias, lobelia, fuchsias, coleus, asparagus fern and vinca.

Fungus Infection Can Be Controlled

The troublesome irritating fungus infection of the feet commonly known as "athlete's foot" is a common problem in many areas where shower and dressing rooms are shared by more than a few people. The spread of this highly-contagious infection can often be controlled by regular disinfection of floors, provision of special footwear for use in shower rooms, and the use of foot-bath disinfectants or foot powders.

Chimney Construction Vital In Home-Building

If your house has a potential fire hazard the chances are that it lies in the details of the chimney construction. Make sure there is a good fire-clay flue lining three-fourths inch thick inside the brickwork or masonry and extending from below the flue opening to two inches above the cap.

An equally important restriction—the violation of which causes hundreds of fires each year—is to have no wood within two inches of any chimney wall, and no wood within four inches of the back wall of any fireplace.

Make sure of the following: Chimneys shall not rest upon or be carried by wooden floors, beams, or brackets or be hung from wooden rafters.

Chimneys shall be built upon concrete or masonry foundations properly proportioned to carry the weight imposed without danger of settlement or cracking.

MUST FILL SPACES

All spaces between chimneys and wooden joists or beams shall be filled with loose cinders, loose mortar refuse, gypsum block, or other porous incombustible material to form a fire stop.

The combustible material shall

be supported by strips of sheet metal or metal lath set into the brickwork and nailed to the wooden beams, forming a buckled flexible joint between, or by similar strips of metal nailed to the woodwork with the inner edge close to the chimney.

No wooden studding, furring, lathing, or pluggings shall be placed against any chimney or in the joints thereof. Wooden construction shall either be set away from the chimney or the plastering shall be directly on the masonry or on metal lathing or on incombustible furring material. Wood furring shall be insulated from the masonry by asbestos paper, at least one-eighth inch thick, and metal wall plugs or approved incombustible nailholding devices attached to the wall surface shall be used for nailing.

INSULATE NOW!

INSULATION PAYS

FOR ITSELF in a VERY SHORT TIME

• SUMMER COMFORT

The same insulation that provides winter comfort will keep out summer heat and keep your home 20 to 30 degrees cooler.

• NO DELAY

Don't wait until it's too late. Insulate NOW and be sure of prompt service.

• A HEALTHY HOME

You can't sleep comfortably in a bedroom that's too hot. Insulation keeps out the summer heat as efficiently as it keeps heat in during winter time. Insulated upstairs bedrooms are as comfortable as any room in the house.

Only 8 hours to

"BLOW" Your Home!

Insulating is not a lengthy process. The average house can be insulated in about 8 hours.

OUR MODERN BLOWER METHOD

Does the job quickly and efficiently causing you no fuss, bother or inconvenience.

Are Your Walls Marked by UGLY STAINS?

Whenever there is a difference in temperature between two walls or a roof, heat will travel from the warm side to the cold side... and there occurs a condensation making a dirty ugly stain.

If your attic is not insulated, heat escapes through the roof and the melted snow forms ice in the eaves (see illustration) and moisture from the melting ice seeps through the wall causing unsightly stains and loosens plaster and wallpaper.

You can stop this costly annoyance by insulating the walls and attic of your home.

It's Costly to Redecorate Economize and Insulate!

For Comfort and Economy There Is Nothing Like Properly Placed

INSULATION

Our methods are Modern and Efficient and include Insulating with

- SHAVINGS
- ROCK WOOL
- ZONOLITE

Don't wait till late summer to place your order... do it Now and be sure of Prompt Efficient Service.

Old Linoleum Pieces Make Excellent Mats

Nothing is more helpful to boost the morale than the brightening up of home surroundings.

After all the cobwebs are swept away and the main housecleaning completed, some last minute details can be attended to with very little extra expense.

If you are replacing your old floor covering with a new piece then check over the old one, and see if you can't get a few pieces from it in suitable sizes for the mats, by cutting them oblong, square or oval as your fancy dictates.

COAT OF PAINT

Scrub well and thoroughly dry them, then give a coat of paint. Let them dry, apply a second coat and dry again. Then stencil a pattern on with odds and ends of paint putting a border around the edge.

Work out your own ideas with modernistic floral designs, or sponge work for centre. Let this dry thoroughly, then apply two coats of floor varnish letting each coat dry well before applying second one.

You will get a thrill out of making those bright little rugs and if you are at all artistic, you can work out many cheerful ideas. You will get many years of wear from the old floor covering.

Each spring touch up these mats with a bit of paint here and there, re-varnish them, and they are as good as new again. A large size water color brush like paper.

Cellar Stairs Bring Accidents

The cellar stairs are a common scene of accidents in the home. You can make your cellar stairs safer by making sure the lighting is adequate and that a handrail is provided. Then all that is necessary is a concentrated course in safety first for children and adults alike.

in school is the best for the fine work.

FLOWER CANS

Also paint flower cans in a cheerful color scheme. Paint a border around the top, stencil a fruit or flower design or anything that suits your fancy.

This puts a bright touch to otherwise drab looking cans. They can be wiped and kept shining clean and they look so much more cheerful.

You will find it surprising how many changes can be made with so little extra cost if one has the knack and inclination to do so.

BIRDS LIKE HOME TOO

Birds, always self-sufficient about finding a place to nest, are often tempted by houses to settle in a garden. Here there is no housing shortage. One firm of long standing manufactures fifty different kinds of bird houses, not just as novelties, but because different birds have their own requirements. A brand new house set out this month may not draw tenants simply because it has not had time to become weathered. Next spring it certainly will prove more than ornamental.

It is still too soon to stop placing food at the wedding stations. Lacking berries and seeds, birds must do considerable scratching to satisfy their constant appetites.

LOW COST PLAYROOM EASILY MADE IN YARD

Homes without adequate basement space need not do without the charming atmosphere of a recreation room, for householders can construct a delightful playroom in the back yard at little cost.

One ingenious couple built a remarkable playroom for less than \$60.

Bricks were obtained from a wrecking and salvage concern. Lumber was obtained in the same fashion, and a one-room place was constructed 13 feet wide and 20 feet long.

The interior was finished in warm tones of insulating panels. These panels insulate and at the same time provide a smooth surface suitable for interior finish.

Insulation is important in a low-roofed playroom, which is apt to become excessively warm in summer.

There is a fireplace, an outdoor barbecue pit, and other touches important to entertaining.

The floor is second-hand garden tile, cleaned with weak solutions of muriatic acid and ammonia.

"Antique" wood for shutters, mantel and trim was obtained by charring ordinary lumber slightly and then scraping it thoroughly with a wire brush.

Colorful Mexican furnishings, ranch house type furniture with buckskin and woven hemp seats made the interior informal and gay.

Your Heating System Is Under Bylaw

So you think the heating system in your proposed new home is solely your problem, eh?

It is—provided it complies with minimum requirements of the city's building bylaw.

All habitable rooms shall be provided with suitable heating facilities capable of maintaining a minimum temperature of not less than 65 degrees Fahrenheit in weather 30 degrees below zero, the bylaw says.

Such minimum temperature is measured at the centre of the room, five feet above the floor.

STIPULATIONS

Then there is the stipulation that all property served by the city's water supply and sewage system must have any dwelling thereon connected to these systems. All dwellings must have at least one water closet and one sink.

The bylaw goes on to lay down general construction requirements.

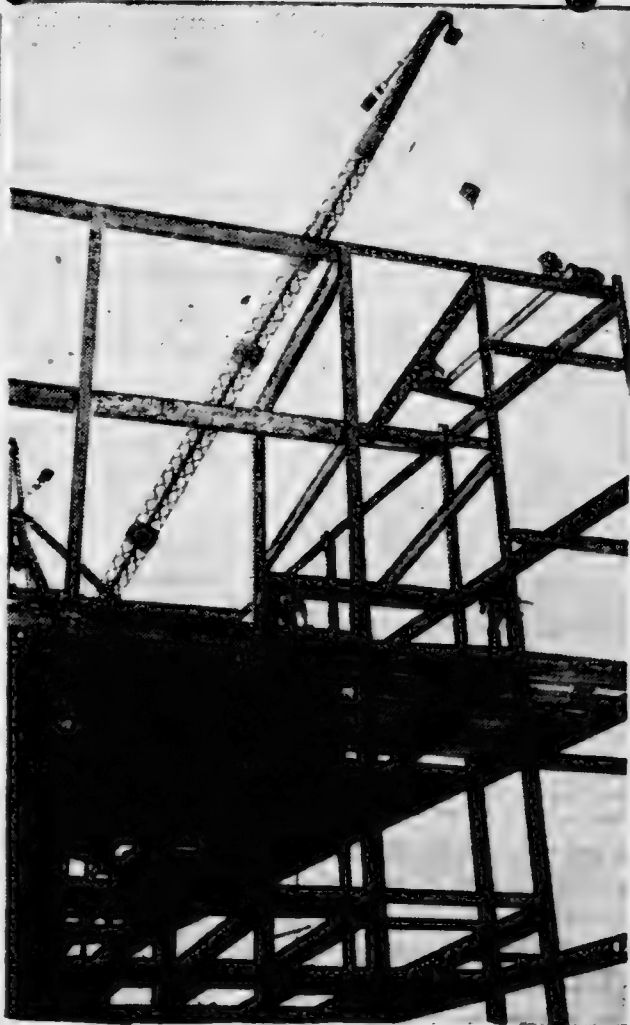

Enclosing partitions of walls of any room must extend from floor to ceiling. When a habitable room is located in the basement, both floors and exterior walls of the basement must be built or treated as to render it water-tight and damp-proof.

Walls and floors of habitable basement rooms must be so insulated and ventilated that there will be no condensation of moisture (sweating).

FLOORS INSULATED

If no basement is provided, floors must be suitably insulated and any woodwork in the unexcavated area shall be treated to prevent rot, or the area properly ventilated.

Another stipulation on which

RISEING STEEL marks beginning of another big project in Edmonton's industrial area as Canadian National Railways build addition to freight facilities on 104 avenue.

many home builders' plans are held up by the city architect and building inspector's office is that regarding bathrooms and spacing fixtures.

The bylaw requires a distance of

at least 1' 6" between front of the water closet and the face of any other fixture or wall. The water closet or wash basin may be located in a recess, provided the recess is not less than 2' 6" wide.

Hurry In Building Is A Detriment

All Factors Should Come Under Review Before Start

Building a house is a serious job, the planning of which should not be done in too much of a hurry.

Buying the lot in a locality which is satisfactory and will stay satisfactory is, of course, the first step, and the location selected will largely determine the exposure, whether to the north, south, east or west, and the type of building most suitable for the setting.

Next comes how much money you are able to spend at the outset and what if any addition you may make at a later date.

It is quite possible to build only part of the ultimate structure at the start and be able to make necessary additions later when you have accumulated more funds—and probably more occupants.

Such a plan will call for some deep thinking so that the rooms now being used will fit into the ultimate building satisfactorily and yet serve for present needs. It will require thought as to the location of the plumbing in particular, but it is not a difficult problem.

You may, however, decide that you will get along with a smaller house to suit your immediate requirements and build another larger one on another site when con-

ditions warrant. There is much to be said for this latter view, because small houses are always in demand and you also have the advantage of moving with the growth of the city.

Structurally, there are many materials available with which to build your home, once you have dug for the foundation, and built it of the usual concrete. Of course, the concrete wall should be sturdy enough to hold up the house you intend to erect and the head room in the basement should be ample to allow you to make full use of it for any purpose.

Some homebuilders do not favor basements, preferring to have all their space on the ground floor. Radiant heated homes are of this class.

Make Sure You Build In Right Spot

Few things can be more costly to the prospective home-builder than starting to build on some one else's property, or in the wrong place on his own.

Cases of people starting to excavate on lots a block away from their own property, and of whole foundations being completed before it is found they are in the wrong place on a lot, are common occurrences at the city architect and building inspector's office.

CAN SAVE PLENTY

By carefully checking lot, block and subdivision designations of their property before starting, builders can save hundreds and sometimes thousands of dollars department officials say.

They suggest the services of a qualified surveyor be sought in staking out all four corners of the lot, and in locating the actual house site.

In doing the latter, city by-law requirements must be kept in mind. These call for a minimum of 20 feet from front property line to the nearest enclosed portion of the house. If an enclosed porch is to be added later, this should be taken into account, to save difficulty when it's done.

Minimum distance from the rear property line to rear of the house must be 35 feet, while a distance equal to 10 per cent of the site width must be allowed on each side of the house.

If a separate garage is to be built, it must be located at least 60 feet from the front property line, and at least 10 feet from the rear property line. It must be at least three feet from each side of the lot.

The Star-Spangled Banner was designated the National Anthem of the United States by Act of Congress in 1931.

MASTER FARMER Jensen of Magrath, Alberta, is mighty proud of his fine layout in south of province. Trim buildings and grounds won owner \$1,000 award from provincial government in Master Farm awards last fall.

Strategy Helps In Child Feeding

Until recently a child's likes and dislikes were completely ignored in his feeding schedule. Foods that were "good for him" were crammed down by force if necessary. Child health experts now rea-

lize that, while a balanced diet is still essential, parents should adopt a more subtle attitude when dealing with finicky child appetites. The way of the "big stick" is not often the best way.

Approximately half of the cultivated area of Cuba is planted with sugar-cane.

Touching Up Furniture In Garden Helps Appearance

The outdoors is again coming into its own. With summer just around the corner and the garden a cool escape from household cares, it's high time to recondition summer furniture.

No matter how scratched and faded you find your present outdoor or summer furniture, as long as it's basically sound, you can use it again this year. It may take a few hours, but a little elbow grease will make a great difference in your summer comfort and enjoyment.

Metal Furniture—If its original shiny coat of paint has begun to peel and crack and let rust stains show through a repainting job is not too difficult. Enamel paint with a synthetic resin base is excellent for painting wood or metal furniture used on the porch or out of doors. Here are the simple steps for repainting:

REMOVE RUST

Remove rust by wiping with cotton waste or oilcloth dipped in kerosene.

Brush off any scale with wire brush, steel wool or coarse emery cloth.

Touch up any bare metal spots with a coat of metal primer.

Apply two coats of enamel, allowing plenty of time for drying between coats.

Wrought Iron—Wrought iron is made from the purest form of iron, and furniture made from it resists rust to a greater extent than do articles made of cast iron. However, a protective coat of liquid wax increases this natural resistance and makes work lighter. Rust stains should be rubbed with kerosene, then scoured with steel wool.

Chromium Plated—Tubular metal frames made of chromium plated steel will resist rusting unless they are unduly exposed to salt air or severe weather. Daily dusting with soft cloth is usually all that is necessary. Fingerprints can be rubbed off with a dry or lightly dampened soft cloth. Never use harsh scouring powders or steel wool.

HIGHLY RESISTANT

Stainless steel tubing is highly resistant to corrosion. An occasional cleaning with mild scouring powder and water improves its appearance.

New Draperies Give Owners Protection

appearance. Daily dusting is necessary. Do not use harsh abrasives or steel wool.

Plastic—A well rubbed thin coat of wax may be used as a finish for furniture made of plastic material. Daily dusting plus an occasional cleaning with mild lukewarm soapsuds is all that is necessary to keep this type of furniture looking its best.

Painted—Wood or metal furniture that is finished with good quality washable paint is easy to care for. It must be dusted regularly with a clean soft untreated duster, and occasionally it will benefit by damp dusting with a soft cloth wrung almost dry of clear, lukewarm water.

Fireproof drapery fabrics made of asbestos and glass have been developed for use in theatres, restaurants, auditoriums, hotels, and other places of public assembly.

The new fabrics are light in weight and said to have excellent draping qualities.

Asbestos fibres have long been used in the manufacture of roofing shingles, siding and other fireproof building materials. Building officials now are recommending that draperies and furnishings used in places of assembly, as well as the buildings themselves, be fireproof or fire resistant.

The linen industry was introduced into Belfast in 1633.

For Croquet

To make croquet wickets more clearly visible when the game is being played at dusk, press a cork fishing float over each wicket, positioning it directly at the top of the arc. The holes in most floats are small enough so that they will be a fraction fit on the wire and will not readily slip out of place. Paint the corks white or bright yellow before slipping them over the wickets.

Cooking With Care

Aids Food Value

Cooking with care is often the secret of success in getting the most food value from vegetables. They should be cooked in a small amount of boiling water with the lid on. If they are cooked too long or in too much water much of the food value will be lost. Vegetables taste and look better when they are cooked properly.

Safety Side Vital Point In Building

**30,000 Are Killed
Annually in Homes;
Location Is First**

When you build or remodel a home, keep the factor of safety in mind. That's the warning of safety experts who point out that accidents in homes annually take a toll of 30,000 killed and 4,000,000 hurt, crippled or disabled.

Planning for safety, they point out, should begin with the location of the house. Adequate surface draining should be provided to prevent the accumulation of snow and ice.

Clothes lines should be located above head height. The play area for the children should be within view of the kitchen window. Driveways should be clear of vision-obscuring hazards such as hedges and trellises.

Space permitting, a turn-around driveway is desirable so that it will not be necessary to back out the car. Walks should be of non-skid composition and should be laid out along an unbroken slope. Don't have steps unless guarded by hand-rails.

SOME SAFETY TIPS

Here are some safety tips regarding construction:

Examine existing buildings for rotted timbers, weak staircases, loose plaster, sagging floors and the like before beginning remodeling.

Build stairways with straight runs and landings instead of winders and angle treads.

Build adequate storage space. Crowded closets are a fire hazard. Storage space for frequently used articles should be no higher than a person of average height standing on the floor. Provide special storage spaces for poisons or combustibles.

Be sure that electrical installations follow the standards of safety agencies in that field.

Bathtubs should be of the "flat-bottom" type. Bathroom electrical fixtures, handles of wall switches and cover plates for the insulating material.

FOLLOW STANDARDS

Follow approved standards for fire safety in construction. Use fireproof building materials, such as asbestos cement shingles and asbestos board, where they can be applied.

Make sure adequate lighting is provided for stairways. Water pipes, air ducts and other "bumping hazards" should be eliminated or painted in bright colors. Identify the water shut-off valve with a clearly marked tag.

Cellar Danger

Cellar, basement or attic stairs often are dangerous because of inability of users to distinguish the steps or railings in dim light. Painting the edges of the treads and the railings of such stairways white will help prevent accidents which may have serious results.

Paint For Roof Every Few Years

Moisture seeping through a leaky roof frequently causes damage which far exceeds the cost of material and labor required to repair the roofing. If openings are small they can be sealed with

roofing cement and painted; larger, strips of roof repair material and paint usually can do the job. Painting the entire roof every few years means real economy in that the paint seals minute openings which might become larger if unprotected and prevents the formation of other openings which might occur to disintegrate the surface.

New York 'Modernists' Turning To Round Lots

Fifty homes, each on a circular lot of an acre, will make up a new type of suburban community in the wooded hills of Westchester county, just north of New York city.

The development covers 97 acres, of which 50 will become homesites. The remainder is retained for parks and playgrounds. Some of the lots touch others at only one point.

WRIGHT AGAIN

Frank Lloyd Wright, famous dean of modern American architecture, is the man responsible for the idea. This comparatively extravagant use of land is intended to insure maximum privacy for each homesite to keep all zoning problems under control, and to protect against undesirable encroachments. At the same time the community nature of the project is emphasized.

The "Usonia" homes project is co-operative. Prospective home builders buy stock, instead of land, and lease their homesites on 99-year terms. Thirty-one families have joined in the project so far.

FAITHFUL DISCIPLES

Fifteen houses—five of them built from Wright's own plans—have been erected so far at costs, quite a supply of fresh air. Very from \$15,000 to \$35,000. Various architects are participating. The sponsors have been pupils and under studies of Wright at Spring Green, Wis.

The cooperative obtained mortgage financing on 12 houses from a large savings and loan association in New York. Running from 10 to 20 years, interest is 4% per cent.

Homes so far built feature excellent facilities and radiant heating. Extensive use of glass, with terraces, strong open porches. Several have large fireplaces. Some such houses have been built on circular lots and others on rectangular lots in the area recently.

Plant Moving Needs Care

Plants may be moved to the verandah during summer, where they may receive plenty of strong light and fresh air.

As they have been unaccustomed to sun, it is best to have them protected most of the day from direct sunlight. The position for the plants during the winter is in windows with a southern exposure.

Plants need all the light they can get in winter, especially those that are expected to bloom. It is well to have the windows tight fitting in order to prevent draughts which are injurious to many plants.

Draw down the blinds at night to keep an even temperature at all times.

Avoid extremes of temperature, but bear in mind that plants require a supply of fresh air. Very tender plants should be moved away from the windows on nights when real cold snaps in the weather are expected.

It is difficult to grow plants in rooms with gas or where gas escapes from the furnace and rises through the registers to fill the rooms above.

Plants need all the light they can get in winter, especially those that are expected to bloom. It is well to have the windows tight fitting in order to prevent draughts which are injurious to many plants.

HARDWOOD FINISHING TYPES ARE OUTLINED

There are three principal types of hardwood finishing.

Paint—This is a relatively new kind of finish but is being used on an increasingly large scale for residential as well as heavy-duty flooring. In effect, it becomes a part of the wood itself and wears only as the wood does.

Varnish—Only varnish intended specifically for hardwood floors

should be used. It presents a glassy, smooth surface, but is not as resistant to stains and spots, but shows scratches. Patching worn spots is difficult without leaving lines between the old and new. As a rule, three coats are required when varnish is applied to bare wood.

Shellac—One reason for its wide use is the fact that it dries rapidly.

Shellac spots rather readily if water or other liquids remain on it long. It is transparent and has a warm gloss. It does not darken with age as rapidly as varnish. Three coats ordinarily are recommended for use on bare wood.

Lacquer—Has glossy finish with the same durability as varnish. Because it dries so rapidly it requires considerable skill in application. Worn spots can be retouched with fairly good results, since a new coat—rather than forming an additional layer—dissolves the original coat.

Age Of Gadgets Invades Gardens

New Devices, Equipment Make Outdoor 'Work' Real Pleasure

With the age of gadgets and inventions constantly supplying the patent offices with an ample amount of book-keeping, it is interesting to note that gardening folk have not been forgotten. Gadgeteers have been looking out for flower enthusiasts and the markets are filled with their wizardry.

Take for instance the new shears designed especially for rose lovers. These small, handy cutters, with their springs and teeth, hold the stem firmly after cutting it and thus save many a thorn-pricked finger. They sell for \$1.49.

TO KEEP RECORD

Non-rusting, non-corrosive metal tags for identification replace the old wooden ones, which blurr after two or three good rainstorms. These tags can be had in several different sizes and shapes attached either to pieces of wire or long metal stakes.

The precious information which goes on these tags is put on by pen and ink—ink that eats right into the metal and makes the writing permanent.

The old cultivating standbys such as hoes, spades and trowels are in abundance in all the stores. However, someone (and it could easily have been a woman) decided to give the feminine gardener a break and designed some on a smaller scale.

EASY-TO-USE TOOLS

A set of these easy-to-use tools, consisting of a spade, rake and hoe, sells around \$4.45.

Also in the cultivating line is a single-pronged gadget with a short handle, costing only 42 cents.

It is used primarily for cultivating close to plants, where the multi-pronged cultivators won't fit and the hoe is dangerous.

NO PASSING FANCY

For the person who's sure that gardening with him is no passing fancy, there's a set of tools with a lifetime guarantee. Light in weight, they (trowel, bulb planter and fork) are made of aluminum and will not rust. They are each one solid piece of metal and have patented finger grips.

Water sprinklers are nothing new, but there is one that seems to be a favorite. It is a rotating sprinkler which gives off a lovely fine mist. Best of all is the way it can be regulated for different areas—putting a halt to the unnecessary watering of sidewalks.

You just turn a little dial for five, 50, or a number in between. Number five will give you a spray five feet in diameter and 50 spreads it across 50 feet.

SPRAY FROM HOSE

An experienced gardener never forgets the inevitable garden pests

and thinks early about spraying equipment. One of the best and handiest on the market is a graduated spray gun which is simply attached to the garden hose.

Into the bottle of the sprayer goes, for example, two tablespoons of spray solution and a certain amount of water (figured and marked on the bottle according to the amount of spray you wish to use).

The suction of the water going through distributes the spray correctly and when the bottle is empty the desired amount of spray has been used.

LIGHT PLASTIC HOSE

Incidentally, this is most likely attached to a light-weight plastic hose. They're fast becoming popular.

Designers have not centred all their talents around the growing of a garden either. They have remembered that people want to get enjoyment from their projects and have provided the garden entertainer with such things as portable barbecues and outdoor furniture. One of the handiest things is a garden cart for serving. It's styled for the out-of-doors and is on rubber wheels.

And there you have it—proof that the flower lover has not been forgotten. There's many a gadget for gardening.

Combinations Of Food Help

"Something old, something new," is a good rule to follow in meal planning. You can often cater to both the conventional taste and the more adventurous spirit by including well-liked foods along with the new taste sensations. This combination will add variety and interest to your meals.

Snacks Can Help Teen-Agers

Teen-agers are noted for their tremendous appetites and for snacking between meals. If chosen carefully these snacks can help to

provide some of the body-building and energy-giving foods that growing youngsters need. Some of the better "snacking suggestions" include fruits, citrus fruit juices, milk, sandwiches with protein-rich filling and ice cream.

17 Ways To Trim Cost On Big Home

Don't Skimp But Think;
When Planning Be Plain

There are many ways of cutting costs without cutting corners when building a modern home. They can give you more house for less money. Better still they can give you a better, larger house for the same money.

It isn't a matter of skimping, but a matter of thinking. Here are 17 ways to keep costs down in building a home:

1. Simple perimeter—Keep plan and elevations as free of breaks as possible. The nearly square or rectangular plan is cheapest.
2. No roof hips or valleys—Every change in a roof line adds extra cutting, fitting, roofing, flashing. A simple gable roof is cheapest. Make it steep enough to avoid the need for expensive underlays of felt or built-up membranes—also steep enough to utilize the attic for extra bedrooms.
3. No sheet metal—Eliminating leaders and gutters is possible with the wide projecting eaves. Although a wide roof overhang is not cheap, roof overhang is not cheap, shelter windows and side walls, keep the house cooler in summer.
4. No basement—Elimination of basement frequently saves considerable. Compensating storage can be provided in attic, garage, or first floor store rooms.
5. Roof trusses—Trussed rafter construction, spanning outer walls permits the finishing of the entire interior without waiting for partitions and framing. According to the University of Illinois, the use of trusses alone may save more than 5 per cent.
6. Pre-cut lumber—The use of one-length studs (7'9") pre-cut in the yard allows for the use of standard 4x8-foot wallboard panels without cutting.
7. Dry wall construction—Standard 4x8-foot panels for walls and ceilings save lathing and plastering.
8. Minimum interior walls—Open planning of rooms dwarf partitions (walls that

don't reach up to the ceiling), built-in plywood storage compartments combine to save much money.

9. Fewer doors—Every door costs from \$50 to \$100 to buy, frame, trim, hang, equip with hardware and paint. Use doors only for bath or

bedrooms. Light plywood and shutters make ideal closet doors.

10. Interior trim—Use no molded trim. A piece of 1 by 4-inch lumber can make a baseboard and lattice strips can trim windows and doors.
11. Windows—Stock windows of simple design can be placed so as to impose the least interference with wallboards.
12. Stairs—Keep them straight for economy. Avoid winders and landings, elaborate handrails and newels.
13. Back-to-back plumbing—When kitchen and bathroom are so planned, one plumbing stack serves both. Also plan on the shortest run to street utilities.
14. Centralized heating—A heating plant near the centre of a house involves shorter ducts and pipes. Remember an inside chimney draws better than an outside flue.
15. Prefabricated chimney—

Low-cost composition chimneys are now approved in many localities and are far less expensive than masonry chimneys.

16. Prefab built-ins—Wardrobes, dressers, chests, china closets, coat closets, beds, etc., can be built of fir plywood and installed on the job when other interior finishing is completed.
17. No paint—At least avoid the necessity for expensive paints. Use stains on natural wood siding and shingles. This will cover in one coat and may be applied at the factory. Or use materials

such as asbestos siding and asphalt shingles that require no paint. Aluminum windows, although requiring no paint, may be more expensive originally than wood windows painted, but in the long run aluminum windows will save their extra cost. Keep long-term economies in mind.

Cure For Windbags

Death Truck Moving Inquest Is Informed

(Continued from Page 1)
on the gravelled portion of the four-lane highway just as he came around the Nisku curve.

"As I came farther I saw a flash-light waving and then noticed a sign on the east shoulder of the road just as I came into the straightaway."

"At first he didn't see what the sign said. With testimony, but he realized it was a warning."

"Then as I got up to the sign I saw 'Police-Stop' but I didn't read the underlying word," he stated.

"I was going to stop at the sign, but I didn't. I thought I might observe what cars behind me. I put the truck into low gear and put the sign trying to figure out what was ahead, when the crash came."

It was not brought out in his testimony what distance Hilt's truck was past the stop sign when the accident occurred.

THREE-TRUCK TRUCK
Will said the truck was a three-ton 1940 Ford, which he was driving on a lumber delivery contract between Placer, Alta, and Edson.

He had about six tons of lumber in the back of the truck. He testified, chained across the top at the front and back of the load. The back chain was tightened with a chain fastener, he said.

At Kavanagh, about eight miles from the scene of the fatality, he stopped and inspected tires, lights and load. Will told the court he turned off the highway to a side road to make the inspection and found everything in order.

What about the lumber project? Will was asked. "How much are you allowed?"

A: Five feet.
Q: Did you measure it before you left Placer?

NOT OVER FIVE FEET
A: I measured it with another employee and we agreed it wasn't over five feet.

Q: Did it sag so as to obscure tail light?

A: No, it was straight out. I don't see how it could hide the tail light. Which was down on the frame of the truck.

Will said later in his evidence that after RCMP had unloaded the truck in Edmonton, it was found some of the lumber was a "few inches over requirements."

The truck driver said he noticed no reflection in his rear view mirror from the headlights of a following car immediately preceding the accident. "I don't know what happened," he stated.

He said he tried to put two flames from his truck out on the road after he had suggested their use to RCMP.

SOUTH OF SCENE
One flare he put south of the accident scene—beyond the police

stop sign—but broke the one he meant to put north of the spot, he said.

So I decided the light from the truck was the best light. I went with it. I saw the light from the woman, I think it was Mrs. Hennyman from the right door of the car, and deciding it was safer to move the injured woman "as far away from the highway as possible."

Later he said he drove his truck into Edmonton, where he was with an RCMP car following him, before he went to University hospital.

MAIN PART
Evidence of the two RCMP constables responsible for conducting the road check April 29-30 formed a main part of yesterday's testimony.

Constable Wood said he had come on duty at 11 p.m. on April 29, and had been ordered to set up a road check near Nisku. He said no particular location had been specified, but that he chose the spot himself because it was just past the Nisku curve where cars normally slow down.

He testified that he had set out the "scotty" sign at the north of the road block which, 100 paces from parked patrol car, was used as a "centre line."

The patrol car was parked on the gravelled section of the highway facing the paved section, he said. Parking lights were on, he stated.

PAVED SECTION TRAFFIC
Constable Wood said he handled the southbound traffic and the other constable on the gravelled section the use of a circumstances warranted.

He was asked how many cars were checked before the two accidents and answered, "We did not do a difficulty was experienced. About the same number of checks were made each way, he stated."

"Did you both occasionally check cars headed southbound at the same time?", Mr. Hart inquired.

A: Yes, it was. Constable Wood answered, but said he "couldn't be sure" if there were times when more than one car was heading in the same direction were stopped.

The constable was asked to describe the first accident which preceded the fatal one.

SAW HEADLIGHTS
"Constable Dick had stopped a northbound car and I had stopped a southbound," the witness said.

"When I saw the headlights of another car coming around the Nisku curve."

"I began waving my flashlight to flag it down but he waved on the straightaway without showing any sign of heading the signal until just a fraction of a second before I hit the stopped northbound car."

"Then he turned west into the east ditch," about 100 feet away later evidence showed.

The constable said he waved on the southbound car he had stopped and ran down into the ditch where he came on Constable Dick already talking to driver of the car which had caused the accident and a passenger.

There was a strong odor of liquor, he said, and when he searched the back of the car, he found a cart

case of beer and a two-thirds bottle of whisky.

HEADLIGHTS AGAIN
He was at this moment he again saw headlights coming into the curve and instructed Constable Dick to go back up on the road, he said.

"Just as I was taking the liquor out of the car in the ditch, I heard a terrific crash," he stated.

"Was that your first intimation the another car was involved, he was asked."

The constable said it was. He added he had not seen around lights coming around the curve. He said he heard nothing of a second vehicle.

CONSTABLE WOOD TESTIFIED
as soon as he got up to the road he was told by Constable Dick there had been a bad accident.

JAMMED IN SEAT
"I went immediately to the rear of the truck. On looking in front of the car I saw people jammed in the front end under the lumber of the truck."

"I got in the truck and with the help of the driver tried to jerk the truck free. The motor was still running."

The constable said he stopped after the truck had been moved to about 30 feet when he was told the jammed car was moving with it.

He said he went to the right side of the car and saw a woman standing on the right shoulder of the road. "I believe it was Mrs. Hennyman."

He then helped Mrs. Campbell out of the car, the constable related, and asked a volunteer driver to take the two women to "Invermay Hospital."

Constable Woods, asked why he did not get involved in the accident, the first accident, said "for our check."

ASKED DRIVER
He said he asked "Mr. Foster," the driver of the car which pushed the stopped car into the ditch if he had not "seen the flashlight."

"He said, 'No, he had been talking to his father-in-law in the front seat beside him.'"

He was then asked if he had looked at the tail light of the truck after the second accident and answered that he couldn't find it.

He said he made an examination of the lumber and started to say "it appeared" when he was interrupted by counsel for next of kin, E. L. McCann.

How did you get up and examine the lumber?
"No," the constable said.

"You examined it superficially," counsel remarked.

There were also exchanges on the question of why the constable had not turned cars off into a side road near where accident later occurred, for the purpose of the road check.

NOT A SIDEROAD
"It's not a sideroad," the constable said. "This driveway into railway property and only goes about 60 feet. Vehicles would have to back out into the highway again. It's not practical."

"There's been evidence it's 20 feet wide," counsel said.

He asked Constable Wood to identify the witness on a photo graph.

"It's not a sideroad. It's a driveway," the constable testified.

"Oh, alright, sideroad then," the constable repeated.

Another counsel asked Constable Wood if it would not have been the duty of the witness to turn cars into the driveway.

TERRIFIC TIE-UP
"It would have meant a terrific tie-up," he was not permitted to say.

"Do you usually have flashlights on highway inspection?" counsel asked.

"Not on this kind," the RCMP man stated.

RCMP counsel asked Dick if he had seen lights behind the truck

or under the truck.

To both questions he answered "No."

HOW LONG AFTER?
"How long after the truck passed the stop sign before the crash?" counsel inquired.

"About 30 or 40 seconds," the constable replied.

Toward close of yesterday's session Mr. Hart introduced eight "short" witnesses.

They gave evidence on conditions at the road check prior to the accident.

All eight were unanimous in the opinion that the police stop sign was clearly visible and that police flashlights at the "centre line" were clearly visible in time for stop to be made at the inspection point.

One witness said the RCMP constable had asked him about the sign's visibility and said he told the constable it was "good."

PLENTY OF TIME
Driver of an oil truck and trailer

He repeated Wood's story of the car being pinned at back of truck.

He said the first thing he noticed was the clearance lights at the back of the truck's trailing trailer.

He was asked why the patrol car had not used a flasher light during the check.

"We thought parking lights 'enough,' the constable answered.

"Do you usually have flashlights on highway inspection?" counsel asked.

"Not on this kind," the RCMP man stated.

World Waits, Prays For Twin Severance

By Ivers Kelly

Eyes of the world are being focussed on Edmonton as prayers are offered for the successful separation tomorrow morning of two little girls born linked together.

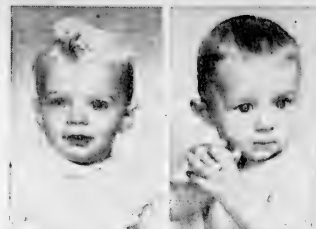

Minutemen of "beautiful letters" from every continent have been received by their mother, from well-wishers who were praying devoutly that the girls would be enabled to live normal, separate lives.

Parents of the twins, who will be six months old next Wednesday, will go to a little church in Edmonton north east, Sunday morning.

THEY WILL PRAY

The young couple, Mr. and Mrs. E. A. (Bud) Townsend, will be in prayer there as skilled anesthetists and surgeons await the operation at Royal Alexandra Hospital, room 3-4-1.

At 10 months, James Ware Wilson, who makes his home at 2205-101st street, is the father of two little girls, a boy and a girl.

MEET an ex-felon: In Northern Alberta division of Edmonton No. 9 will open its first week with special ceremony Sunday.

Sunday Parade, Supper To Open Air Cade Week

Royal Canadian air cadets of Edmonton No. 9 will open its first week with special ceremony Sunday.

Sunday morning the cadets will hold a church parade, and in the afternoon, at 2 p.m., the "open house" in the air cadet lounge at RCAF station, Edmonton.

A buffet supper will conclude the day's program.

Feature attraction of the afternoon program will be a rifle competition, with members, some previous competitors for the Edmonton Rifle League offered for the first time this year.

Complete home service of food and refreshments will be available.

Physics Branch Of Engineering Graduates 10

The University of Alberta, Edmonton, has announced that 10 graduates of the physics branch of the engineering faculty have completed their studies and will receive their degrees this week.

The graduates are: Mr. J. H. Macdonald, Mr. J. H. Macdonald, Mr. J. H. Macdonald, Mr. J. H. Macdonald, Mr. J. H. Macdonald, Mr. J. H. Macdonald, Mr. J. H. Macdonald, Mr. J. H. Macdonald, Mr. J. H. Macdonald, Mr. J. H. Macdonald.

Where You Are Always Sure of Quality

No Increased Radio Fee

With an apparent 1950 deficit of \$900,000, the Canadian Broadcasting Corporation has informed a parliamentary committee that it will require an increase in the radio licence fee of from \$2.50 to \$5.00 per annum to maintain its present services.

The deficit the CBC cites is the best reason why it should not be given a higher licence fee.

When the expenditures of a public body, over whose spending parliament has control, exceed its revenue, it is the poorest kind of a remedy to give it more money.

There is a general conviction in Canada that the CBC is performing a useful public service in its sustaining programs that carry no advertising.

Many of these programs are excellent and elevate the cultural status of Canadian radio.

Therefore the CBC should have all the money it requires, within reason, to continue these programs and to improve them.

But that money should not be collected as a separate licence fee. It should be de-

derived from the general revenues of parliament and channeled through a department of government so that parliament may have some control over its expenditures.

Moreover, the people of Canada should not subscribe one cent, either directly or indirectly, to the support of a public broadcasting body that competes for revenues with private enterprise.

If the CBC is to be maintained with public money, it must get out of the advertising field and abandon its functions of radio control.

Nothing could be more unjust than that a controlling body should compete with stations under its control on money contributed by the people of Canada.

What Canadian body should compete with stations under its control on money contributed by the people of Canada.

1. Restriction of the CBC to unsponsored programs.

The establishment of a separate controlling body not engaged in broadcasting.

With a set-up of this kind, Canadians would not object to any sums given the CBC provided they were given through a government department.

British Still Swings Right

Municipal elections in England and Wales appear to indicate that the swing to the right, marked so clearly in the late general elections, is continuing.

Out of 378 councils, 353 have reported results showing the Laborites to have made 119 gains and suffered 210 losses while the Conservatives have made 270 gains and suffered only 60 losses.

The swing is not unexpected and, it must be admitted, municipal elections do not always indicate a general trend in national politics.

Nevertheless, with the two parties so evenly balanced in the House of Commons, the slightest evidence of a reaction one way or other is bound to be seized upon as significant.

It is obvious that Prime Minister Attlee might be defeated on a snap vote at any

time and would have to go to the country. It is generally thought that should his government last out this year it would be through miraculous luck.

The problem facing both parties, then, is this:

Has the trend to the right continued throughout Britain or have the Labor forces made desperate through their close calls, put forth a special effort to swing the pendulum sufficiently backward to gain a working majority in the House?

Even a hail of seats, changing one way or the other would do the trick.

The municipal elections, everything being considered, would appear to show that the momentum of Mr. Churchill and the Conservative party has not perceptibly diminished.

The Significance of the Ascension

Next Thursday is celebrated in the Christian Church as Ascension Day.

It is one of the major festivals of the Church, regarded as of equal importance with Christmas, Easter and Pentecost.

Christmas commemorates the birth of our Lord, when God the Son took on human flesh to dwell among us.

Easter commemorates the death of Christ on the Cross for the sins of the whole world and His Resurrection from the dead that man might rise from the dead on the last day.

Ascension commemorates Christ's ascent into heaven before the eyes of His disciples.

And, finally, Pentecost or Whitsuntide commemorates the descent of the God the Holy Spirit upon the apostles, according to Christ's promise to them, and the birthday of the Church Militant here on earth.

The ascent of our Lord into heaven is one of the historical facts of the Christian Faith.

Besides the eye-witness testimony of the apostles, all evidence points to the truth of the account.

Christ died on the Cross and arose again on Easter Day. For forty days He

was seen by a veritable multitude of people. And then He completely disappeared and was seen no more on earth.

But the most convincing evidence of His Ascension is that He Himself had foretold it and that His disciples, according to his word, is an essential part of the Faith.

Christ, it must be remembered, is God. And during His earthly existence, He was God man, that is, all men and the representative of all men.

He died, as all men must die, and He arose from the dead, as all men will arise. The fact that His body was resurrected, arose from the dead, made it possible for all men to arise from the dead.

He who died, as all men must die, and He arose from the dead, as all men will arise. The fact that His body was resurrected, arose from the dead, made it possible for all men to arise from the dead.

In making His own flesh immortal, He also made it possible for all human flesh to be immortal.

This is the significance of the Ascension. It is to be regarded as merely a dramatic and miraculous episode in the life of Christ, but as a necessary and vital part of Christian doctrine.

ODDS AND ENDS

Against the Garden Fence Two Small Faces Pressed

I went out into my new garden and walked up, fixing in my mind what I wanted to do.

There were beds that asked themselves to be planted.

There were corners that asked themselves to be planted.

There were patches of lawn that asked themselves to be planted.

There were beds that asked themselves to be planted.

There were corners that asked themselves to be planted.

There were patches of lawn that asked themselves to be planted.

My Mother, I heard a small, friendly voice say:

"I want to see a sharp and there was a little face crossed with blonde hair pressed against the other side of the fence."

"I said, 'Hello, little girl!'"

"I said, 'Hello, little girl!'"

"I said, 'Hello, little girl!'"

"I said, 'Hello, little girl!'"

"I said, 'Hello, little girl!'"

"I said, 'Hello, little girl!'"

"That," I said, "will be nice." And I was on my knees.

"I want to see a sharp and there was a little face crossed with blonde hair pressed against the other side of the fence."

"I said, 'Hello, little girl!'"

"I said, 'Hello, little girl!'"

"I said, 'Hello, little girl!'"

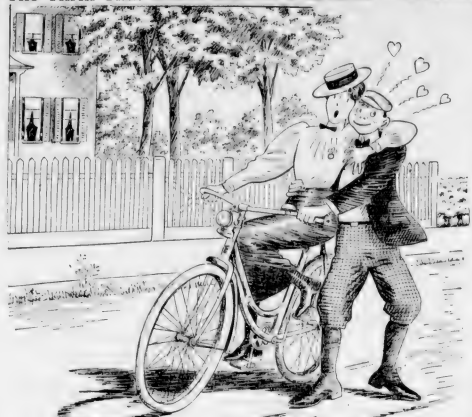

"I said, 'Hello, little girl!'"

"I said, 'Hello, little girl!'"

"I said, 'Hello, little girl!'"

The Thrill That Comes Once in a Lifetime

Robert Ruark

Veteran To Veteran For Juvenile Lead

One of the more magnificent showmen around New York belongs to Harry Middleton, whose hair has suddenly turned grey and whose face is lined beyond his middle years.

Mr. Middleton is roughly in the spot that was inhabited by Harry Truman when President Roosevelt went away. Mr. Middleton takes over on June 1, for Senator Elin Pina in a present called "South Pacific," of which you may have heard.

This is generally accepted to be a very heavy and beyond the call of anything except money. For Mr. Pina, a greyness, corrected Italian who fell from the scene of marital embezzlement, has been the darling of all females from Jeanne Seuss to grandmothers, since he seemed opposite Harry Truman a year back.

Mr. Pina, I suppose, is the sexiest granddaddy on record. His sex-appeal has been great that he has skipped some of the performances without wrecking him at the box office.

He will, however, change the outer costume for the part, because he knows a scene in every scene as fresh as a bond strata. In impeccable words, Mr. Middleton feels that a scene is apt to get away if he works for a living on a tropic sea, and so Mr. Middleton will dress the part of a sweaty de Beque.

He will, however, change the outer costume for the part, because he knows a scene in every scene as fresh as a bond strata. Letters to the Editor

Ve's Plight

Editor, Bulletin—In sympathy with a letter from Veteran whose letter was in your paper May 9.

I am a Vet who has received the very kind of treatment you have received and wonder what DVA, V.L. and the welfare office are three for.

As most veterans have been there for it is time we got together through the Canadian Legion and let the public know just what DVA is really doing and why are veterans having such a time to survive as this is such a lot of paper telling what wonderful things are being done for the vet.

Now I know that the government has made provisions for vets who have been disabled or lost in the service but the administration seem to think they are the big shot who have disabled or lost their limbs and their government.

I know just what it is to lose a good job with good security and try one with \$40 a month and a pension disability from other doctors.

Let us try to do something about this farce.

W. H. FORTY NINER

Bulletin Boaster

Editor, Bulletin—Recently one of your readers wrote you how much he liked The Bulletin. Being a newspaper, I am interested in what I would like to read in second his approval.

Through your editorials and the constructive criticism offered in your paper I have become quite interested in civic affairs. Also your editorials on national and international events, as well as the point to it and I wish you could give these subjects more space on the editorial page.

THE VOICE OF ONE

By FRANK S. MORLEY

Home Can Be Beautiful If Pitfalls Are Avoided

Someone once used a descriptive phrase for the modern family, "Home, Sweet Home."

Families that also use the phrase very long, marriages don't last very long and nobody's still very long. It is a sad story, the history of a household, that we have reached a critical stage of development.

Of course a major reason for the breakdown of modern marriage is the rise in our industrial civilization, wherein women can support themselves and men no longer require women to make their clothes, cook their food, or perform a thousand tasks now performed by business firms. Marriage, however, is a very old thing, and it has many fundamental troubles.

By means of flowers and showers, youth gets married in royal splendour, and the answer to all problems lies in the road. Love will find a way, young couples are asked if they have thought on the problems of marriage, they reply, "We love one another."

As if any couple gets married without loving one another? We have too much love, it is said. True love is not merely an emotion. It is a way of living, a sharing of interests, a sharing of life, and late, an interlocking of life which leads to deep understanding.

As if any couple gets married without loving one another? We have too much love, it is said. True love is not merely an emotion. It is a way of living, a sharing of interests, a sharing of life, and late, an interlocking of life which leads to deep understanding.

As if any couple gets married without loving one another? We have too much love, it is said. True love is not merely an emotion. It is a way of living, a sharing of interests, a sharing of life, and late, an interlocking of life which leads to deep understanding.

As if any couple gets married without loving one another? We have too much love, it is said. True love is not merely an emotion. It is a way of living, a sharing of interests, a sharing of life, and late, an interlocking of life which leads to deep understanding.

As if any couple gets married without loving one another? We have too much love, it is said. True love is not merely an emotion. It is a way of living, a sharing of interests, a sharing of life, and late, an interlocking of life which leads to deep understanding.

As if any couple gets married without loving one another? We have too much love, it is said. True love is not merely an emotion. It is a way of living, a sharing of interests, a sharing of life, and late, an interlocking of life which leads to deep understanding.

POURING OUT Ice cold milk shake is waitress Kay Henkink for new early patrons of Golden Spike, 10142-87 street, and Joyce Kuffler, 10134-87 street. Attractive new restaurant realizes ambitions of proprietors.

Golden Spike Restaurant Realization Of Ambition

The new Golden Spike restaurant, 10261 Jasper, is a dream come true for a pair of veteran Edmonton restaurant men.

Henry Martineau, 9722-84 avenue, and Eddie Weiss, 9727-00 avenue, have worked for years toward opening of this latest and most modern of Edmonton restaurants.

Their investment in the Golden Spike is more than money. It's hard-earned experience, earned as salesmen and small businessmen.

Golden Spike patrons that they will be getting the most moderate prices consistent with quality food and service.

Henry Martineau gained his first business knowledge with Edmonton City Bakery, serving the company for six years as a bread salesman.

He got his first restaurant in 1942 when he opened the Avenue Coffee Shop. After selling it in 1942, he expanded his operations with Ye Old English Fish and Chip Shop, and joined Weiss in 1947 to lay plans for the Golden Spike.

Eddie Weiss' experience goes back to the lonely day in 1926 when he arrived in Edmonton, a young Dutch immigrant of 16, unable to speak a word of English and without a single acquaintance in the city he was to grow up with.

ON FARM

After a year on a farm 10 miles south of Edmonton, he came into the city to work for City Dairy where he picked up his first knowledge of English.

A variety of depression jobs followed until 1926 when he joined the Edmonton Creamery. After seven years with the firm, he left to form his own butter company, McElroy's Butter Creamery, a year or so later.

He turned to the restaurant business in 1942, opening the Sals 1942. He added a second restaurant in 1943 at the present Golden Spike address and joined forces with Martineau in 1947 to develop the new enterprise as a shopplace among eating places.

Their choice of the name "Golden Spike" is significant of their faith in the future.

Golden Spike has become a symbol of the spectacular development in the Edmonton area ever since it started into production on February 10, 1949. And to Martineau and Weiss, the name is the link which this week marks their future with that of the city which the old development on which is based.

Glass Of Water Means More Happy Customers

"A good waitress is a girl who meets her customer with a pleasant smile, a happy greeting and a glass of water."

That's the way it should be, and that's the way it's going to be at the new Golden Spike restaurant 10261 Jasper, says Manageress Holly Stuart.

Miss Stuart, after 13 years in cafe business, has strong ideas about what a good waitress should do. And nothing is more important, she says, than making the customer feel at home.

"Give him a glass of water, even if he's only having coffee, and he knows you haven't forgotten him," she observed.

The menu comes next and now, before the waitress at the Golden Spike who can't explain the merits of a given dish to her customer. That kind of waitress doesn't work at the Golden Spike.

Neither does the one who puts her fingers into the water glasses, wipes the glassware on her apron or refills it right when setting the table, snubs the customer who only wants coffee, or continually puts her long hair.

But that first glass of water is the big thing. And at the Golden Spike they spend their water like money.

Aircraft Must Declare Route At U.S. Border

OTTAWA, May 12.—(UPI)—Defense Minister Brooke Claxton told the Commons yesterday all aircraft, whether public or private, would have to file flight plans with American defense authorities when crossing the U.S. border from Canada.

Claxton said this was ordered as a result of U.S. defense plans to set up six defense zones over Eastern and Western approaches to the United States. The zones would extend from Lake Michigan to the Atlantic Coast, and roughly from the latitude of Edmonton to the Pacific Coast.

Replying to Opposition Leader George Drew, Claxton said no similar zones were being taken for north-bound aircraft by Canada on account of defense zoning, but special rules of flight would apply through the defense department.

Canada Won't Return Polish Art Treasures

QUEBEC CITY, May 12.—(UPI)—The Soviet-satellite Polish government had fair warning today that if it wanted to recover art treasures brought to Canada during the war for safekeeping it would have to battle to get them.

It would take more than a court order to get them, Quebec Premier Maurice Duplessis told his weekly press conference yesterday.

The treasures, for which the Federal government disclaimed responsibility, are under guard in Quebec's provincial museum, where duplicates had them taken when the Polish Communist regime showed signs it would do anything to get them back.

Food Production Aid—EDMONTON BULLETIN, Friday, May 12, 1950 11

NEW DELHI.—(CP)—To assist the food production drive the Indian government has agreed to make a large grant to the government of Bombay during the current financial year. The amount will be used for repairs in minor irrigation works.

At the beginning of 1950, some 41,200,000 people had joined Britain's national health service.

Women's Conference—NAIROBI.—(CP)—The first African Asian Women's conference was held here recently. Mrs. V. Jyothy Sondhi, who presided, appealed to the women to work with the integrated society of Europeans, Africans and Asians. She also suggested an institution of scholarships for educating African women.

Smelter Explodes—MADEIRA, Eng. May 12.—(AP)—Two persons were reported missing and 15 others injured after an explosion and fire last night at a metal works here. The explosion was heard for 20 miles. The blast occurred in the plant's melting shop while firemen were fighting the fire.

Success to the

Killing Ends Gang War In Brooklyn

NEW YORK, May 13.—(UP)—Police today rounded up all members of Brooklyn's leading juvenile gangs, the "Gardies" and "Tigers." They fought a battle in Prospect Park last night in which one was killed and another wounded.

A 16-year-old "Gardie" boy admitted he fired the shot that killed a 16-year-old "Tiger."

Anthony Scarpelli, chief Deputy Chief Inspector Frank O'Leary he told James Fortunato, a recent high school graduate.

"I shot him," Scarpelli said, "but I don't want anyone else to take the blame."

Police questioned Dominick La Rua, 16, about the slaying of Fortunato, 17, who was in "good condition" at Methodist Hospital.

40 ROUNDED UP
Scarpelli and La Rua were among 40 youths rounded up in the park after the slaying.

Fortunato, the hospital told police, had gone to the park for a fist fight with "La Rua," a member of the rival gang who was later identified as La Rua.

Scarpelli said he fired while fighting with Fortunato, but claimed he was aiming at a group of "Tigers" and not at the victim.

Scarpelli was held on a homicide charge and La Rua for felonious assault. Seven youths were charged with disorderly conduct and unlawful assembly.

Store Dines Its Walkers
Johnstone Walker Bowling League and staff members were management guests at the fourth annual bowling dinner banquet in the Trocadero, Wednesday evening.

Johnstone Walker Bowling trophy was awarded to the Toronto winning league team who scored 400 for the honor.

Vernice Schaefer won the W. O. trophy for high score of 238. Edward Seaside, Chris Miller, and Mrs. Edna Gilchrist took the E. D. Davies trophy for her highest single game score—306.

Other trophies went to O. Lynn high double game of 513, Cecil Dill, Edna Seaside, and Mrs. E. D. Davies. Mrs. E. D. Davies, high Easter score of 306.

Head table guests were Mr. and Mrs. Cecil Sullivan, Mrs. T. S. Sullivan, Mr. and Mrs. V. Y. Houlden, and Mrs. W. O. Davies. Mrs. E. D. Davies, high Easter score of 306.

FBI JUNE HUNT
The FBI joined state police in the hunt for a man because case involved an interstate money shipment.

Payroll was being delivered from a Springfield, Mass. bank when two gunmen, hiding inside a taxicab, shot and killed the driver and trunked him and escaped.

The federal bureau slightly less than four months after the murder, announced a nationwide hunt for the man, who was described as a man with a mustache, wearing a dark suit and tie, and carrying a briefcase.

He had been in hospital more than a year.

George Washington, first president of the United States, was born Feb. 22, 1732.

\$5,000 Reward Spurs Brinks Bandit Hunt
THOMPSONVILLE, Conn., May 13.—(UP)—A \$5,000 reward spurred an eight-state search today for four masked bandits who stole a \$16,000 payroll at the Bigelow-Sanford Carpet Co., after clubbing three guards of a Brinks' armored car.

Twenty-four armed after the robbery were engaged as down from state police and state constables and ten other men were sent to hunt for the bandits.

But, they said, "it might be any day now."

Over windows, doorways, porch or terrace, Canvas Awnings protect your furnishings and add charm and beauty to your home. Compared with the enduring satisfaction that is surprising moderate. Call us today for estimates without obligation.

NINE-CENT SHOW RUINS SCHOOL ATTENDANCE

INDIANAPOLIS, May 13.—(AP)—The manager of the Walker theatre agreed today his nine-cent bargain show was under compulsion to public schools.

Police and school social workers yesterday started an investigation when Crispus Attucks high school and a nearby grade school reported nearly 1,000 absentees.

They had hardly enough pupils left to keep going. It took only a little scolding to discover Walker's morning bargain, being enjoyed by about 1,000 youngsters.

The manager agreed to call off the whole thing. The pupils went back to school, where admission is free every day.

Drama Group Wants Home
CALGARY, May 13.—(CP)—City government of the Division Drama Festival, which was held in 1952, yesterday passed a motion calling for the setting up of a permanent home for the festival and establishment of a small permanent staff.

The festival was becoming too large an enterprise to be solely handled by part-time workers, it was said.

Governors also re-elected Ron Vincent Massey and D. Park Jamieson of Sarnia, Ont., as president and chairman, respectively.

All officers this year are busy in anticipation of the change. It was learned that permanent headquarters will probably be in Toronto.

The governors also resolved to introduce a monthly bulletin of information on drama activities across the country. Rev. Emilie of Montreal was named to head a committee to investigate and set up this wing of the organization.

The festival committee awarded the prize for the best Canadian play presented in a regional drama to John Saulter, Toronto, for his play "Drums Are Out." It was presented at the Central Ontario festival. The award is \$100.

J. Earl Lawson, Ex-Minister Dies
TORONTO, May 13.—(CP)—J. Earl Lawson, 50, president and managing director of Odessa Theatre of Canada, died yesterday of a heart attack after a long illness of national service in the Conservative cabinet of the late Vincent Massey, died yesterday.

He had been in hospital more than a year.

George Washington, first president of the United States, was born Feb. 22, 1732.

Commons Holds Own 'Farmers' Day'
Western Members Have Floor, Discuss Wheat, Hogs, Trees
OTTAWA, May 13.—(CP)—It was farmers' day in the Commons yesterday.

Members from Canada's western agricultural areas held the floor most of the day. They had plenty to say, most of it critical to Agriculture Minister Gardiner.

The first opportunity came when Mr. Gardiner introduced Jones (COF-Victoria) for consumption of more apple juice—a new Assistance Act, under which wheat farmers suffering drought or other disasters get financial help. Another, even wider, opportunity came when Mr. Gardiner tabled his departmental estimates.

But there was so much talking that not one of the estimates totaling \$75,000,000 got through.

WHEAT TO HOGS
Everything from wheat to hogs and tree fruits came in for discussion. There was criticism of the proposed PFMA amendments and other facts of agricultural policy. There also were some suggestions and a few personal parts of a pork for the minister.

In a general statement, Mr. Gardiner said Canada's butter stock, totaling 17,000,000 pounds, was not a surplus. And the government's attaché of the Canadian embassy here, yesterday submitted a plan to the Chilean government under which Chile would buy Canadian wheat.

Normally Chile obtains her wheat from Argentina but recently there have been proposals to seek grain in French markets. Julio Ruiz Chullen, minister of economy and commerce, said he would study the Canadian proposal.

Senators per cent of the population of India depend on agriculture. In reply to an appeal by O. L. for a living.

Chile Gets Wheat Plan From Canada
SANTIAGO, Chile, May 13.—(AP)—Guy Steward, commercial attaché of the Canadian embassy here, yesterday submitted a plan to the Chilean government under which Chile would buy Canadian wheat.

Normally Chile obtains her wheat from Argentina but recently there have been proposals to seek grain in French markets. Julio Ruiz Chullen, minister of economy and commerce, said he would study the Canadian proposal.

Senators per cent of the population of India depend on agriculture. In reply to an appeal by O. L. for a living.

Hospital Aided By Donations

CONSORT, May 13.—Several improvements for Consort hospital were voted recently by members of the Consort hospital auxiliary. Curtains will be furnished to the hospital nursery and bathroom seats will be purchased with the money donated by Mrs. J. Young of Consort.

Members also decided to place a letter box near the main entrance of the hospital for outgoing mail of the patients and staff.

A-Energy Sub Under Experiment
AMSTERDAM, May 13.—(AP)—The First Sea Lord of the Admiralty said yesterday Britain has an atom-powered submarine in the experimental stage.

Admiral Lord Fraser of North Cape did not elaborate on his statement, made at a press conference during an official visit to the Netherlands.

The National Society for the Prevention of Cruelty to Children was formed in New York in 1875.

Boy And Horse Topples Into Fruit Cellar
YAKIMA, Wash., May 13.—(AP)—A 16-year-old rider was pinned beneath his horse for 40 minutes yesterday after the animal toppled backward down a fruit cellar stairway in a freak farm accident. The rider, wedged in the fruit cellar stairs, was rescued by a fireman.

The first efforts at organizing a fire brigade in London were made by the insurance companies in 1832.

Edmonton To Be Program Feature

Johnny Armstrong Will Sing On Chuckwagon Program

By Maury Soward
Bulletin Staff Writer

"Salute to Edmonton" will be made this week by Burns "Chuckwagon" Thursday night at 7:30 p.m. on CFBN.

The show, originating from Vancouver, features each week a young star from some western Canadian city. This week it's Johnny Armstrong, the young singer who has been making a name for himself around CFBN.

He took top honors in Mart Kenney's Search for Talent last year.

He will sing "Northland" composed by MacMillan, and "The Big Guy" at two, and "The Palomares" at four. The picture program features the picture "The Palomares" which calls him "The Palomares".

ITALIAN-BUILT helicopter, with double rotor and unusual rudder assembly, was demonstrated recently in Rome. One of smallest such craft in existence, plane weighs about 1,100 pounds, has four-cylinder, 80-horsepower motor, and maximum range of 400 miles.

Does Video Need Some Commercial Sponsors?

By Don Gilbert
Canadian Press Staff Writer

LONDON, May 12.—(CP)—With television soon to be within the reach of 35,000,000 Britons, a debate has started on whether video can pay.

Lord Simon of Walsingham, chairman of the BBC, says it can.

Sir Ian Fraser, member of parliament and former BBC governor, said financial aid from advertisers is needed.

Actress Jean's Modesty Appears To Be Genuine

By Pat Usher
Canadian Press Staff Writer

NEW YORK, May 12.—(CP)—A modest actress sounds like a contradiction in terms, but Jean Arthur, currently enchanting New York stage-goers in "Peter Pan," seems bent on proving it isn't.

Stories about her shyness and aversion to publicity have been current for years. In 1942 she was dubbed by the Women's Press Club in Hollywood one of the least co-operative actresses in the movie genre because she avoided reporters as much as she could.

Now she's a Broadway star. Yorkers that her attitude is just a myth.

At the opening-night curtain of the revival of the Barrie play, the enthusiastic audience called for a speech from Miss Arthur, who plays the title role of the playful boy with wings. She stood with the rest of the cast, embarrassed and silent. Finally, Bert Kanner, who plays the dual roles of Captain Hook and Mr. Darling, stepped forward.

If the building is isolated and all services cut off, said J. N. McGrath, station manager. "The army authorities rely on us to carry emergency messages, and we cannot fail them."

"We will also keep CBC mobile units at every critical point along the lines and food materials and will carry the story of this great catastrophe not only in the local, but to the national audience."

Television's future in Britain currently is under examination by an expert committee headed by Lord Beveridge, the architect of the British Welfare State.

Sponsored programs, in sound as well as vision, have been urged by many influential groups. Other witnesses equally important have detected the present BBC monopoly.

Lord Simon told the Newspaper Society's annual dinner that Lord Beveridge "said not to have reported one for months."

Million Dollar Loss Suffered In Plant Fire

OWEN SOUND, Ont., May 12.—(CP)—Damage was estimated at close to \$1,000,000 last night in fire that destroyed the main machine shops of the William Kennedy and Sons machinery plant and threatened other buildings.

After a stiff two-hour fight, firemen believed they had the blaze under control about 8 p.m. although shift in the wind from west to north caused concern that it might flare up again.

The machine shops contained \$300,000 worth of machinery, while two houses owned by the company were also destroyed and a small grocery store and living quarters above it were destroyed.

Incident on Broadway in 1947 and in 1948 before going on tour, it still is a delightful entertainment.

"The Four Lads," a young Canadian singing quartet, currently has been at a cathedral choir. Making their night club debut there are Cosmic Contrasts, 10 First Avenue, 18, Henri Torville, 18, and Jimmy Arnold, 18. The youths, who were trained at a cathedral choir school in Toronto, entertain the patrons with a medley program that includes French-Canadian folk songs, spirituals and jazz numbers. Their engagement runs another six weeks.

"Highland Fling" (the popular music) about the highlands of Scotland is back in town for a three-week engagement, bringing joy to lovers of tartan and bagpipes. And the musical, which ran 58, perform-

WIDE CAREER CHOICE FOR NURSE

WIDE CHOICE with the Canadian Order of Nurses is the last lap in the long career of nursing. In the degree of Bachelor of Science in Nursing, which is offered by the University of Alberta, the nurse can choose to specialize in many different fields. The degree is offered by the University of Alberta, the first in Canada to offer this degree. The degree is offered by the University of Alberta, the first in Canada to offer this degree.

PHARMACY GRAD STARTS WORK

DISPENSARY DUTIES in the drug store where she served her apprenticeship. The graduate, who is a member of the Canadian Order of Pharmacists, will begin her work in the dispensary of the University of Alberta Hospital. She will be working under the supervision of the head pharmacist, who is a member of the Canadian Order of Pharmacists.

KAY TANNER CHOSEN HISTORIAN OF CLASS '50

CLASS HISTORIAN is traditionally the girl chosen by her senior classmates as most active in all phases of campus life—scholarship, sports and social activities. Pretty Kathleen Tanner is the daughter of Mr. and Mrs. H. E. Tanner, and has been prominent in a number of activities. She is a member of the Delta Delta Delta fraternity, and has been chosen as the class historian for the year 1950.

TRAINING FOR HOUSE ECCERS

POPULAR PAT Scott is going to be among the twenty-two Housewives who will receive their training in the next year of the University program. She will be receiving practical training in the next year of the University program. She will be receiving practical training in the next year of the University program.

ARTS GRAD IN LIBRARY WORK

LIBRARY WORK has been chosen by Anna Smith from among the graduates of the University of Alberta. She will be working in the library of the University of Alberta. She will be working in the library of the University of Alberta.

Careers Ahead For Graduates

NEARLY 200 young women from the University of Alberta's 1950 graduating class will receive degrees in every faculty but engineering, dentistry, agriculture and divinity.

Over the traditional white graduation dresses and black gowns they will sport the green and white hoods of Arts and Science, the pink of Household Economics and silver-grey of Commerce, the crimson of Medicine, the crimson and white of Nursing, the red and white of Pharmacy, and the royal blue of Education.

This year's graduates are lucky, for they will have no difficulty finding jobs for which they have trained. Especially in the fields of medicine, nursing and education the need for trained professional people is still urgent.

After the pomp and ceremony of Convocation, they will begin to carve out niches for themselves in the careers they have chosen: nursing, teaching, social service, library work, research, journalism, civil service, statistics, accounting, research, merchandising, laboratory technology, secretarial work, advertising, radio—and perhaps most important of all—marriage.

LUCKY STUDENTS PLAN EUROPEAN TRIP AFTER GRADUATION

HOLIDAY ABROAD provides the perfect finishing touch to a liberal Arts education, and Daniel 1950 is busy with tentative plans and plans for her four-month trip. Following Convocation exercises next week, when she will receive her Bachelor of Arts degree, Daniel will leave for the east with Miss George Kelle and Diana Kelle and will be joined later in Europe by her parents, Mr. and Mrs. Frank W. Kelle. As conditions in post-war Europe improve, more and more Canadian students are travelling and studying in England and France.

Grad Calendar Gives Busy Week

For four days next week the University of Alberta will be in a busy week. The calendar for the week is as follows:

Monday, 10 a.m.—Rehearsal for graduation in Convocation Hall.

Tuesday, 11 a.m.—Valedictory exercises and Founder's Day ceremony in Convocation Hall.

Monday, 1 p.m.—Alumni Association dinner in Athletics Hall, followed by a reception in the Commons Room and Banquet Hall.

Tuesday, 8:30 a.m.—Caps and gowns issued in Commons Room and Banquet Hall.

Tuesday, 1:15 p.m.—Graduation exercises at McLaughlin Church, followed by tea for graduates and guests in Athletics Hall.

Tuesday, 8:30 p.m.—Informal dance at Lakeside Pavilion.

Wednesday, 5:30 a.m.—Caps and gowns issued.

Wednesday, 1:45 p.m.—Graduation exercises at McLaughlin Church, followed by tea for graduates and guests in Athletics Hall.

Wednesday, 9:30 p.m.—Hall in the main dining room of the Macdonald hotel.

Party Planners Look To Specialty Lines

By Des Thrifty

Party planners have plenty of puzzling problems these days. But the human being is a friendly sort of creature and if he feels inclined to go partying he'll do so.

Most hostesses are solving their entertaining, food problem by increasingly careful planning, buying in "just-right" quantities. They manage to serve something attractive, unusual... and of course just a little bit more elegant than their last party hostess.

Tobe on Fashion—

Silk Foxesppers in Fashion

World in New Short Skirts

Have you seen any of the

new short skirt for slacks?

The newest for slacks fashion

and, unless I miss my

guess, it will be one of the

most popular. Already I see

a lot of smart women wearing

them here in New York and

they look much more sprin-

gling than heavy mink skis.

These little fox skirts are

usually only one skin wide

and are about reaching just

below the waistline. Actually

the fashion started in Paris

last year with black fox, a

very kind of fox is pretty

used this way.

If you can't buy new fur

right now, it's a grand excuse

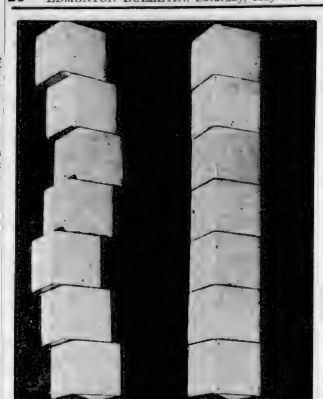

to get your old silver foxes

out of storage and have them

made into a smart little skirt.

WHICH ONE looks like your spine?

WHY GROW OLD

Spine Is Important For

The Feeling of Fitness

By Josephine Lowman

We certainly take our poor old backbones for granted,

although they and their supporting muscles hold us up

all day long, and sometimes half the night!

Just think of your spine as the

main support of your body. It

holds you up, and without it

you would be a pile of mush.

It is the backbone of your

body, and it is the only part

of you that does not grow

older. It is the only part of

you that does not get weaker

with age. It is the only part

of you that does not get

sore. It is the only part of

you that does not get

tired. It is the only part of

you that does not get

old. It is the only part of

you that does not get

weak. It is the only part of

you that does not get

sore. It is the only part of

you that does not get

tired. It is the only part of

you that does not get

old. It is the only part of

you that does not get

weak. It is the only part of

you that does not get

sore. It is the only part of

you that does not get

tired. It is the only part of

you that does not get

old. It is the only part of

you that does not get

weak. It is the only part of

you that does not get

sore. It is the only part of

you that does not get

tired. It is the only part of

you that does not get

old. It is the only part of

you that does not get

weak. It is the only part of

you that does not get

sore. It is the only part of

you that does not get

tired. It is the only part of

you that does not get

old. It is the only part of

you that does not get

weak. It is the only part of

you that does not get

sore. It is the only part of

you that does not get

tired. It is the only part of

you that does not get

old. It is the only part of

you that does not get

weak. It is the only part of

you that does not get

sore. It is the only part of

you that does not get

tired. It is the only part of

you that does not get
